Mechanical seal

Mechanical seal R-APV

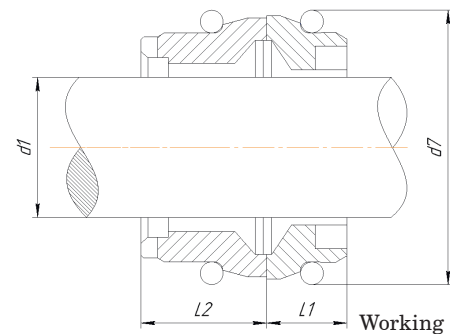

Temperature: $-20^{\circ}\sim 150^{\circ}$
Pressure: ≤ 0.8 mPa
Speed: ≤ 15 m/sec

Materials

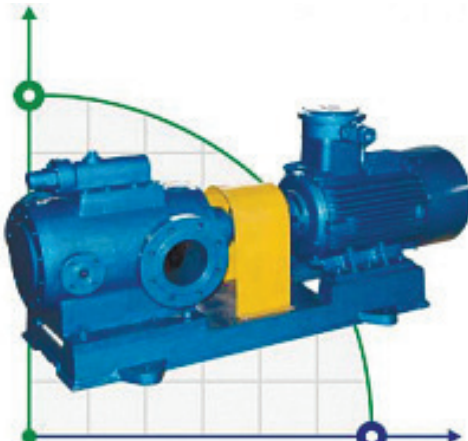

- 1 Rotary ring: SiC.
- 2 Stationary ring: Carbon/SiC.
- 3 Bellows: EPDM.

R-APV	d1 (H6)	d7 (h8)	L1	L2
	25	46	11.5	17,5
	35	56	11.5	17,5

It is applied for APV W+ pump series

Bitumen pumps

Bitumen pump is designed for organically formed amorphous or viscous liquids transferring: flux oil, black oil fuel, lubricating mineral oils and petrochemical products. All these components are used in the manufacture of roofing felt, mastics, and insulation rolled material, asphalt and many other the composition of the bitumen: solid particles, organic oils and resins. At medium temperatures, such a mass, which has a high viscosity, hardens quickly, so it must be heated for pumping. Natural bitumens with impurities of asphaltenes or bituminous oil are difficult to develop. Most often in the industry, technical bitumens are used-derivatives and products of oil processing. The composition of both natural and artificial bitumens is similar: solid particles-resins-oils. As a result, bitumens

are absolutely non-hygroscopic. The hydrophobic properties of bitumen are extremely high. This, together with the plasticity of the properties of this material depending on the temperature regime, determines its wide application. For pumping products of this kind, so-called bitumen pumps, pumps for bitumen, gear pumps, screw pumps are widely used. The properties of the medium form the design features of bituminous pumps. The main features of such units is the presence of a heating jacket.

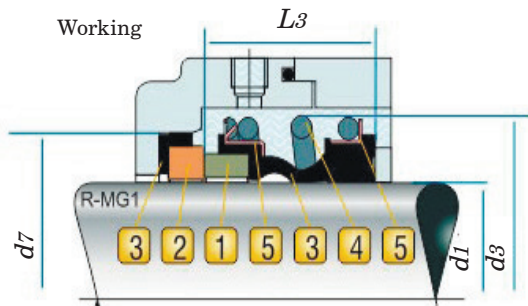

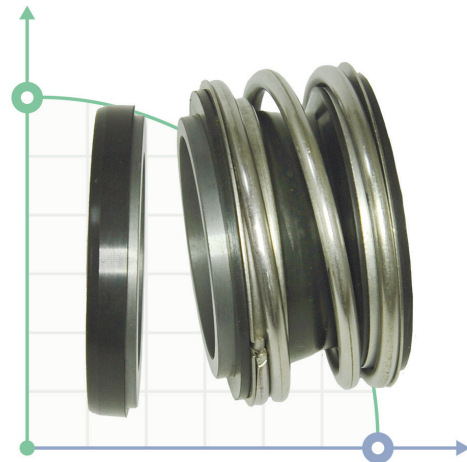

Mechanical seal R-MG1

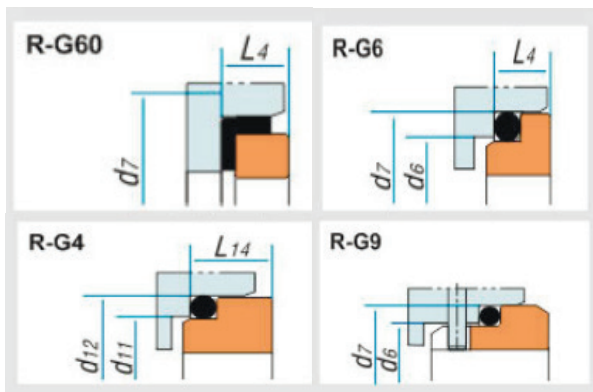

Temperature: $-20^{\circ}\sim 140^{\circ}$
Pressure: ≤ 1.4 mPa
Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: Carbon / SIC / TC.
- 2 Stationary ring: Ceramic / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Type of counter ring

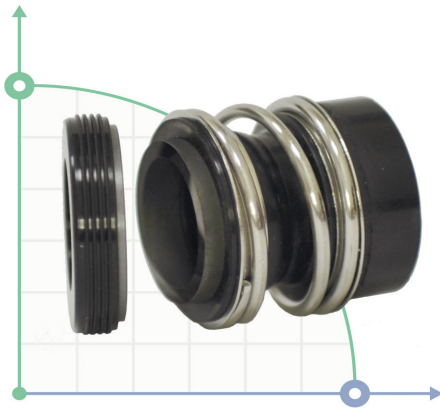

Single end seal (pump cup) MG1, with an elastomeric bellows, unloaded, with a central spring, independent of the direction of rotation of the shaft.

Used in centrifugal pumps, mixers, and other equipment that includes rotating mechanisms for water and drainage water.

It can be used for Alfa Laval, Ebara (3M, DWO), Lowara, KSB (Etanorm, Etachrom), WILO (MVI, MHI, IPL/DPL), Grundfos (CDM), Saer (IP) pumps and many others.

Analog of mechanical seals: Burgmann MG1, AESSEAL B02, Flowserve PacSeal 190, ROTEN L3, Vulcan Type 19, ANGA A1, Sterling SMG1, Hermetica 212.N2

Type of counter ring

The rubber bellows shaft seal R-2100 is a compact mechanical seal with a single central spring and a rubber elastomeric bellows that ensures maximum efficiency and performance of your equipment in all conditions.

It can be used for Gorman-Rupp, Ebara (3M), WILO, ONC, SNC, ONC pumps and many others.

Analog of mechanical seals: John Crane 2100, 2100S, 2100K, Flowserve Pac-Seal 140 / 142 / 143, ANGA A4 / A41, Vulcan Type 14 / 142 / 143, Sterling 540 / 542 / 543, AESSEAL B09U

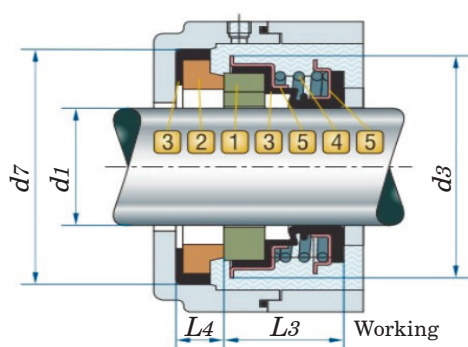

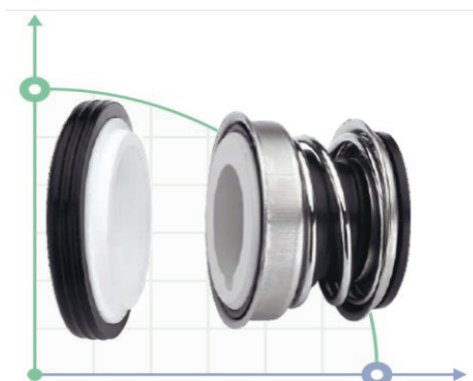

Mechanical seal R-102

Temperature: $-20^{\circ}\sim 80^{\circ}$
Pressure: ≤ 0.3 mPa
Speed: ≤ 3000 rpm

Materials

- 1 Rotary ring: Ceramic
- 2 Stationary ring: Ceramic
- 3 Bellows: NBR .
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Hydroponics, peristaltic pump

Peristaltic pump for continuous control of the pH level in the solution. Application: greenhouse, hydroponics. pH Control Pump is a peristaltic pump that makes growing easier, making it easy and enjoyable. It allows you to maintain the pH level your plants need in water. To do this, place the device in a tank with irrigation water. Perhaps one of the most undetected aspects of gardening, pH is very important in both hydroponics and conventional "earth" gardening. The pH is measured on a scale from 1 to 14, and the pH value of 7 is considered neutral. The use of pH control Pump provides better absorption of useful substances by seedlings.

pH Control Pump operates completely in automatic mode, you do not need to perform any additional manipulations or complex actions, just set the desired value and that's it. General characteristics: - Power supply 100-240V in AC currents.- 4-bit 7-segment display for displaying information.
- BNC connector for connecting the pH probe.
- Switch, 3 positions: charging, switching on, waiting.
- Refer to the product label for the speed and pressure of the peristaltic pump.
- PH measurement range: 0-14 pH (sensitivity: 0.1 pH).

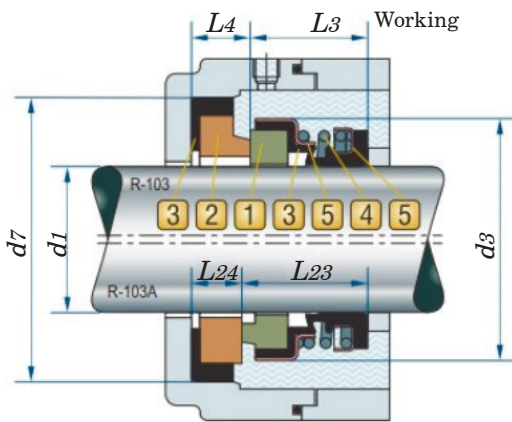

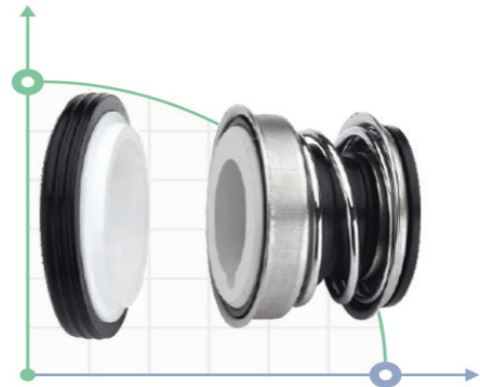

Mechanical seal R-103/103A

Temperature: $-20^{\circ}\sim 120^{\circ}$
Pressure: ≤ 0.4 mPa
Speed: ≤ 3000 rpm

Materials

- 1 Rotary ring: Car/Cer/SiC
- 2 Stationary ring: Ceramic/SiC
- 3 Bellows: NBR/EPDM .
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Analog Flowserve 16, SEALOL 6, US SEAL.

Vacuum pumps

A vacuum pump is a vacuum system unit designed to create and maintain a vacuum.

The main parameters of vacuum pumps include the following:

- the lowest residual pressure that can be created by a pump;
- gas pumping rate per unit of time – pump capacity (l / s, cubic meters / hour)

Vacuum pumps are classified both by type of vacuum and by device.

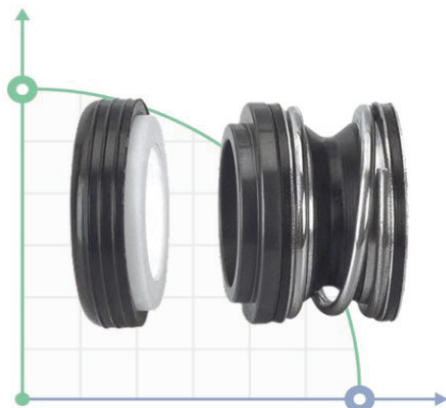

According to the type of vacuum, pumps can be divided into low (105...10² PA), medium (10²...10⁻¹ PA), high (10⁻¹...10⁻⁵) and ultra-high (10⁻⁵ PA and below) vacuum pumps.

By design, pumps are divided into mechanical, piston (including mercury - piston), diaphragm, plate-rotor (including water-ring), screw,

Ruts, spool, spiral, magnetic discharge, jet, ferry oil, diffusion, ferry oil booster, sorption and cryogenic. Applications of vacuum drying with the help of pumps: Drying of gas and oil pipelines; Drying of electronic chips; Drying of mineral building materials (tiles, bricks, facing panels) Production of foamed polymers (Styrofoam, foam, etc.) Drying of lumber Drying of food products Freeze-drying in the food and pharmaceutical industry, etc.

Mechanical seal R-6

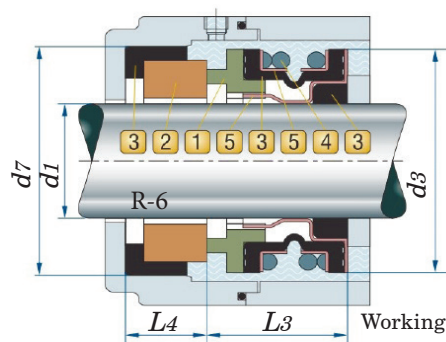

Temperature: $-20^{\circ}\sim 150^{\circ}$
Pressure: ≤ 0.5 mPa
Speed: ≤ 3600 rpm

Materials

- 1 Rotary ring: Carbon / SIC.
- 2 Stationary ring: Ceramic / SIC .
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Drum pumps

Drum pumps material of manufacture: PP, PVDF, PPHT, PTFE, AL, SS304, SS316L Performance: from 70 to 200 liters per minute Characteristics The Set consists of:

- Electromotor
 - Pipe pumping part
 - Digital flow meter (optional)
- Characteristics BTS-HD Drum pumps combine modern production technologies with proven and reliable design features. They are a convenient and efficient means of transferring and distributing most liquid chemicals from barrels, canisters, and flow bins. These pumps are available in an assortment of engineered plastics or polished SS 316, which provides a wide range of chemical compatibility. Pumps are available in lengths, corresponding to your needs, all pumps can be used interchangeably with any electric or pneumatic motor. They can quickly be changed

in accordance with the specific requirements to the pump or engine. The delivery of acids, alkalis, and reagents in barrels and IBC containers has become a common practice. The specified container is often a reverse container, which means that it must be quickly and carefully emptied and returned to the sender. Since containers with a drain located at the bottom were banned in many countries due to the risk of spillage, the only way to pump out the liquid was to use a hole in the lid. Drum pumps are the most suitable equipment for this work.

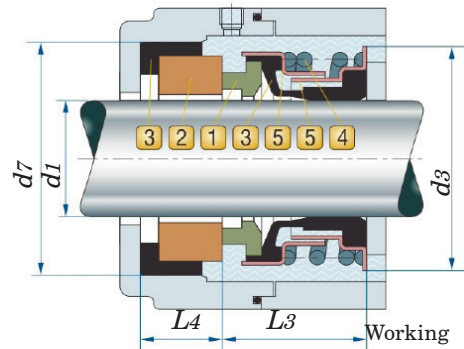

Mechanical seal R-16

Temperature: $-20^{\circ}\sim 150^{\circ}$
Pressure: ≤ 0.5 mPa
Speed: ≤ 10 m/sec

Materials

- 1 Rotary ring: Carbon / SIC.
- 2 Stationary ring: Ceramic / SIC .
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Mechanical seal R-6/16

Applied to Alfa Laval, Ebara, Lowara, KSB (Etanorm, Etachrom), WILO

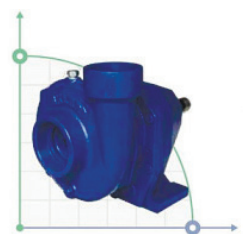

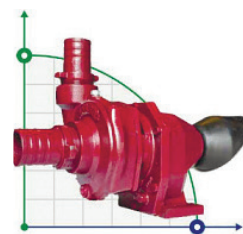

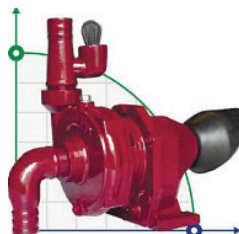

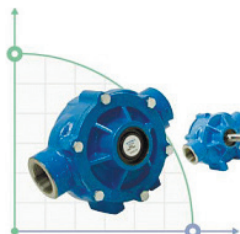

Analog: John Crane Type 6, PacType 16

Pumps driven by tractor PTO

PTO pump for :

- water intake for irrigation systems
- pumping out water during floods
- fire fighting, feeding water from canals, lakes, and storage facilities
- refueling of special equipment or by direct supply through high-pressure hoses to the place of fire or fire.
- Watering, row-to-row and drip
- preparation of the herbicide solution (mixing) before filling the sprayers (to prevent stratification of water and herbicide)
- preparation of water solutions (mixing in the tank) by the pump from the PTO drive (power take-off shaft)

Mechanical seal R-MG1S20

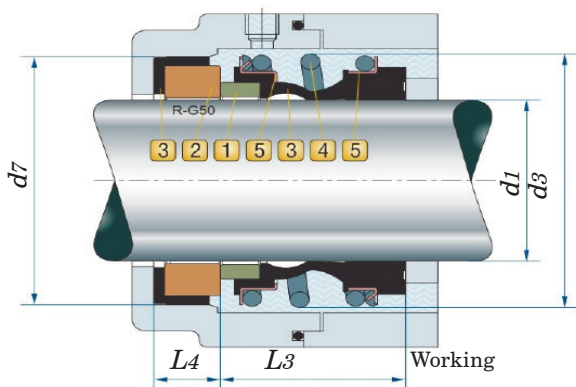

Temperature: $-20^{\circ}\sim 140^{\circ}$

Pressure: ≤ 1.6 mPa

Speed: ≤ 10 m/sec

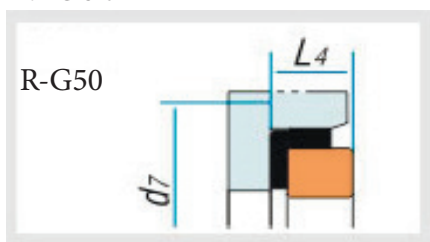

Materials

- 1 Rotary ring: Carbon / SIC
- 2 Stationary ring: Ceramic / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Type of counter ring

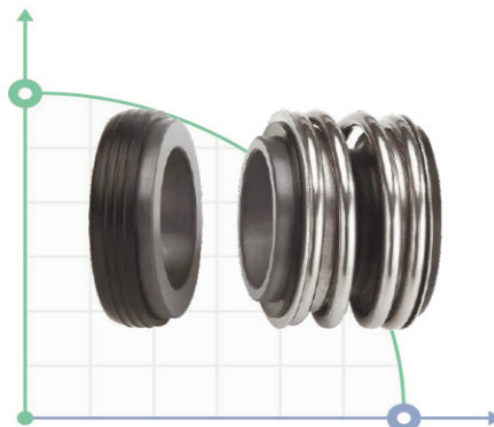

R-MG1S20

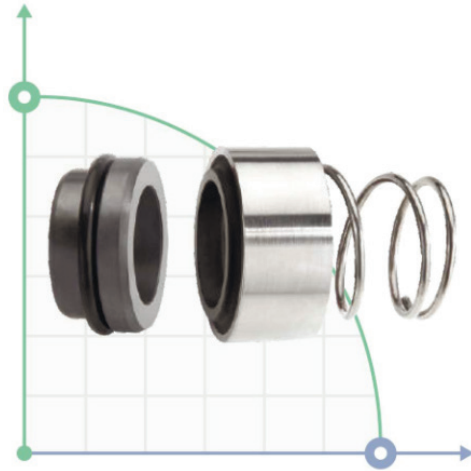

Single mechanical seal R-MG1S20

Used in pumps: Alfa Laval, Ebara, Lowara, KSB (Etanorm, Etachrom), WILO (MVI, MHI, IPL/DPL), Grundfos (CDM), Saer (IP), and many others.

Analogue: Burgmann MG1S20

Type of counter ring

Single mechanical end unit with conical spring R-H12N

Apply to Hecker HN 430N pumps, CR, NBG, Grundfos, TP, NKG, CLM, CRN series pumps and so on.

Analogue: Burgmann H12N/H17GN, Flowserve 43D seal, Latty T901D seal, Roplan R62D seal, Roten, AESSEAL T01DB.

Mechanical seal R-108

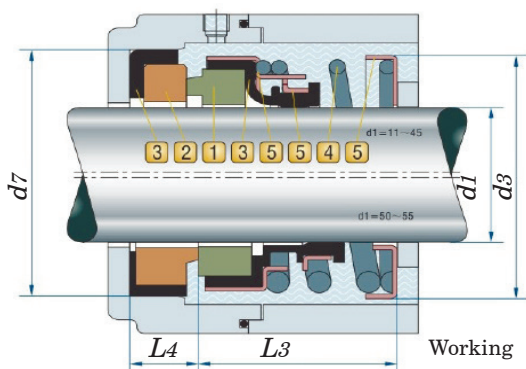

Temperature: $-20^{\circ}\sim 180^{\circ}$

Pressure: ≤ 0.6 mPa

Speed: ≤ 10 m/sec

Materials

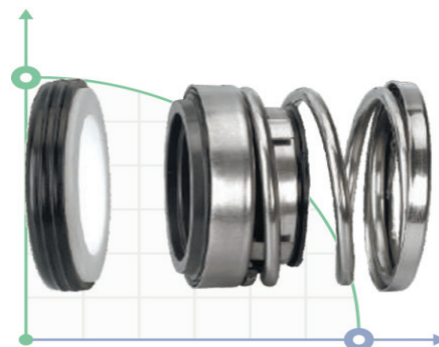

- 1 Rotary ring: Carbon/SiC/TC/Ceramic.
- 2 Stationary ring: Ceramic/SiC/TC .
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Single mechanical seal R-108

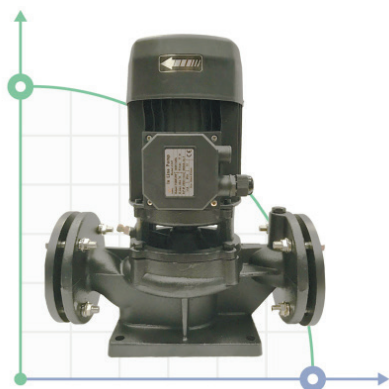

Used in Hidrostat, Wilo, Inbeat, Grundfos, Haigh, Hilde, INOX, Inoxpa, Jabsco, Johnson and so on pumps.

Analogue: Burgmann MG910/ D1-G50, John Crane 1A (N SEAT), 100 Flowserve, Latty T100, Roten 51.

Pumps for heating systems

Circulation pumps are a constant component in the heating and water supply circuits. They got their name because of their function of liquid circulation in closed circuits. A distinctive feature of circulation pumps is extremely low power consumption, relatively small size of the overall design and low noise level. The combination of these factors makes the choice of these devices the most optimal for private homes and multi-family households. Pumps with optional power control can be used in open and closed systems. Application: operation of the Underfloor heating systems; operation in air-conditioning systems and filtration circuits; functioning in heating systems and water supply structures; circulation of heat carrier in heating and hot water supply systems

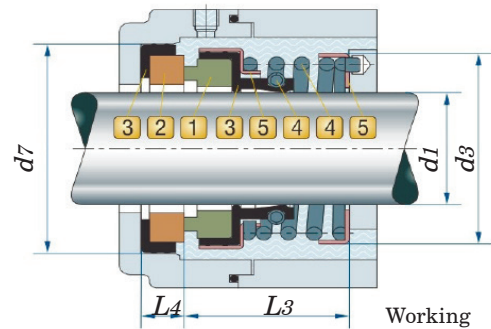

Mechanical seal R-156

Temperature: $-20^{\circ}\sim 80^{\circ}$
Pressure: ≤ 0.4 mPa
Speed: ≤ 10 m/sec

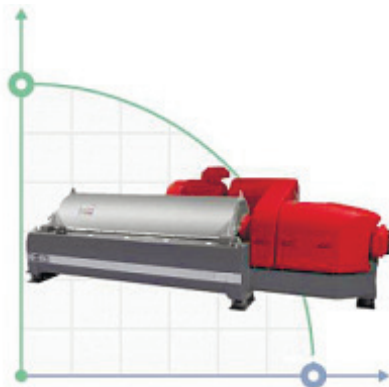

Materials

- 1 Rotary ring: Carbon.
- 2 Stationary ring: Ceramic.
- 3 Bellows: NBR / EPDM / VITON

Decanter centrifuge

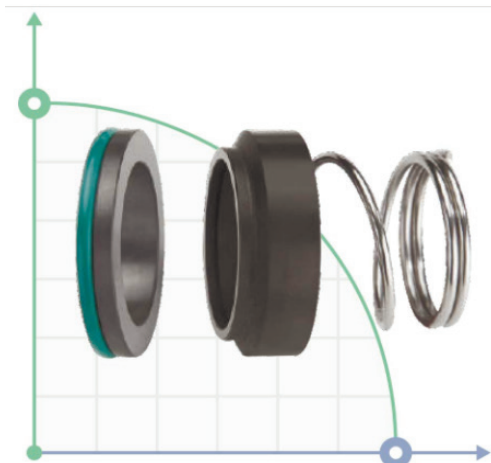

HAUS produces decenter centrifuges and separators for the treatment of waste and drinking water, for the oil industry, drilling industry, beverage production, processing of animal and vegetable fats, mining industry, for the production of starch, as well as for the chemical and pharmaceutical industry.

The main goal of the HAUS company is to produce high-quality mechanisms that are based on modern technologies and install them at the highest level in order to meet the wishes of the buyer. In this way, in order to achieve these goals, Hakki Usta supports its employees with motivation and constant training.

HAKKI USTA has been focused on creating a global HAUS brand with exports and a wide network of dealers since 2010. HAUS is classified

as HAUS Centrifuge Technologies Co. for sales of industrial equipment, and HAUS Food Co. for sales of equipment for milk and oil Applications of decenter centrifuges

- Waste water and sludge from chemical and biological plants.
- Cleaning of petroleum products.
- The waste water of industrial facilities.
- Separation from the impurities of the waste oil.

Mechanical seal R-M2N

Temperature: $-20^{\circ}\sim 180^{\circ}$

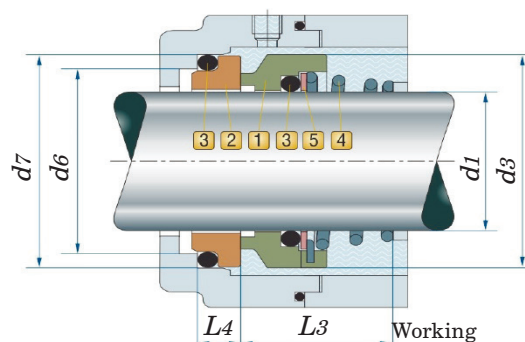

Pressure: ≤ 1.0 mPa

Speed: ≤ 15 m/sec

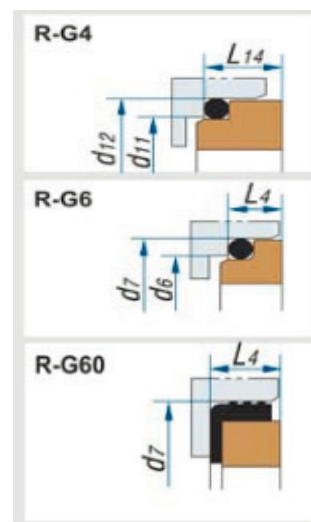

Materials

- 1 Rotary ring: Ceramic / SIC / TC.
- 2 Stationary ring: Carbon / SIC / TC/SUS.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Type of counter ring

Mechanical seal R-BT-RN3

Used in pumps: Lowara, Ebara (3M), EMU, Flugt, Fristam, GEA Tuchenhagen, Goetze, etc.

Analogue: Burgmann BT-RN3 seal, Flowserve 42 seal, Latty T900 seal, Sterling SR2 seal.

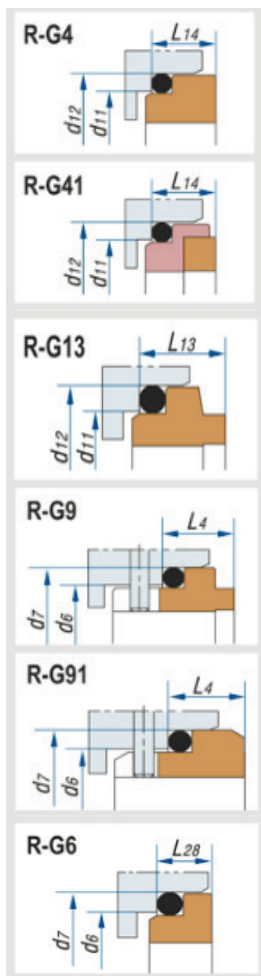

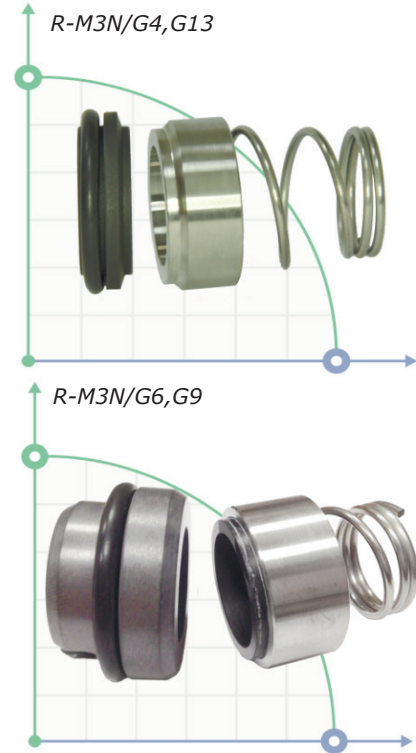

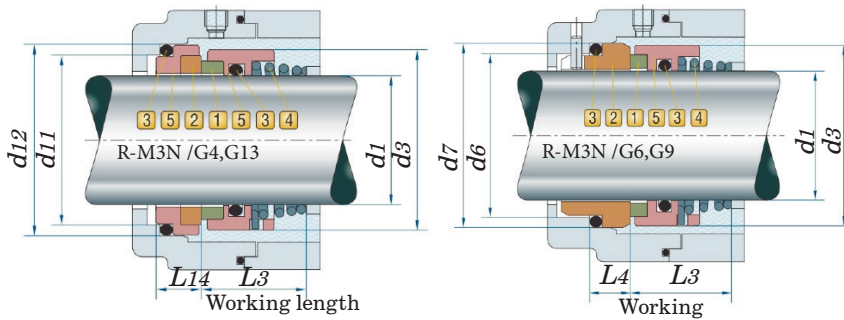

Mechanical seal R-M3N

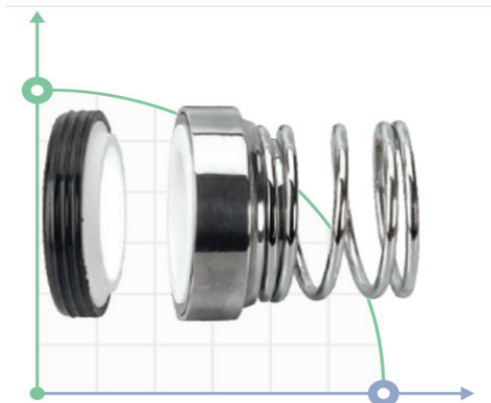

Temperature: $-20^{\circ}\sim 180^{\circ}$
Pressure: ≤ 1.2 mPa
Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: Carbon / SIC / TC.
- 2 Stationary ring: Carbon/Ceramic/SIC/SUS.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Mechanical seal R-101

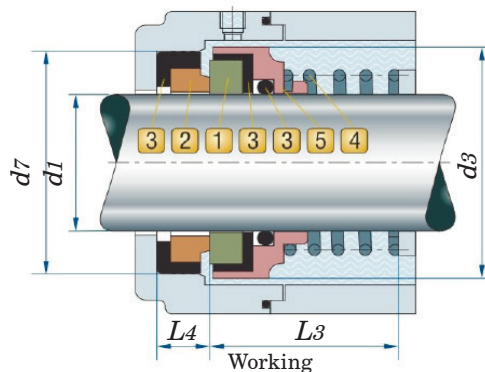

Temperature: $-20^{\circ}\sim 80^{\circ}$
Pressure: ≤ 0.4 mPa
Speed: ≤ 3000 rpm

Materials

- 1 Rotary ring: Ceramic / SIC .
- 2 Stationary ring: Car / SIC .
- 3 Bellows: NBR / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

R-101	d1 (H6)	d3 (Max)	d6 (h8)	d7 (± 0.5)	L3	L4 (h8)
	16	30.0	23.0	35	22	8
	25	42.5	29.5	41	31	9
	35	54.0	41.0	52	36	9

Single mechanical end seal with conical R-101.
Used in various pumps, compressors, mixers, mixers.
Analog: AESSEAL T07 / T07D / T07X, Roten UNITEN 22, Hecker HN 400A.

Spiral heat exchangers

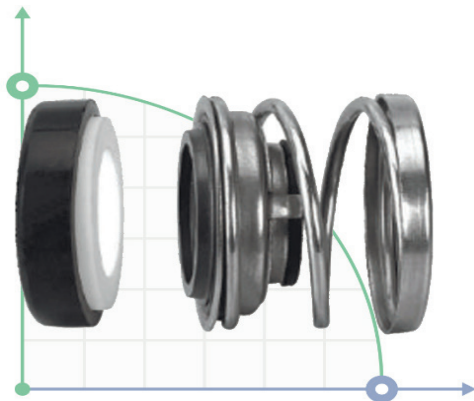

Our company has been working with spiral heat exchangers for more than 20 years and has experience in designing and operating spiral heat exchangers in many enterprises.

Spiral heat exchanger, heat exchanger for bards, spiral heat exchanger for kneading, a helical heat exchanger for oil, heat exchanger for heat recovery juices, spiral heat exchanger, fat, spiral heat exchanger for DDGS, Recently, more than two dozen projects have been implemented with the replacement of heat exchange equipment, as well as the design and commissioning of new facilities

in the alcohol industry, agro-processing enterprises, chemical production and heat power companies. Spiral heat exchangers are used for:

recovery of process cycles where liquids contain impurities and inclusions, for example: batch cooling cycle for the production of bioethanol and alcohol. Cooling of fermentative vats, fermentation vats (so-called remote spiral heat exchangers)

In cycles of recovery of contaminated liquids, recovery of hot effluents of municipal enterprises and industrial enterprises. Revolving closed cooling technologies in the presence of natural resources, in compliance with the rules of ecology and safety (river, lake, etc)

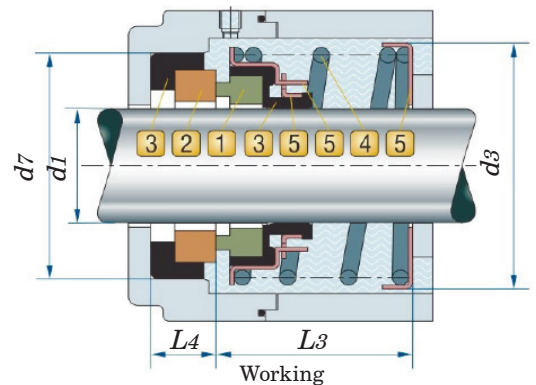

Mechanical seal R-110

Temperature: $-40^{\circ}\sim 150^{\circ}$
Pressure: ≤ 0.4 mPa
Speed: ≤ 10 m/sec

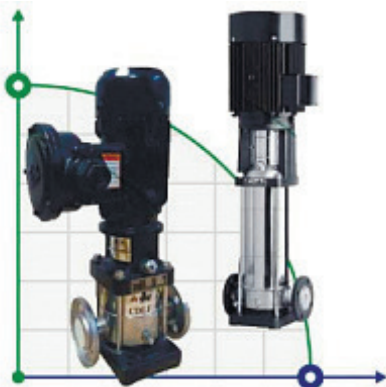

Materials

- 1 Rotary ring: Carbon/SiC/TC
- 2 Stationary ring: Ceramic/SiC/TC.
- 3 Bellows: NBR / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Pressure boosting pumps

Multistage pumps are designed to increase the pressure in the existing water supply network, ensure circulation of liquid in heating systems, air conditioning, ventilation, water treatment, and increase the pressure in technological processes. Multistage pumps can be horizontal or vertical. To improve the water pressure, you need to buy a pump to increase the pressure, but not in cases where the water pipes are clogged with a corrosive build-up. The price of such a device is determined by its power, the maximum temperature of the pumped liquid, and other parameters. Characteristics of pumps for increasing pressure water pressure In each apartment in Ukraine may differ due to the height of the lift. Therefore, you have to choose a pump to increase the water pressure with a certain capacity. The range

and price in our online store in Russia allows you to make a choice freely, since each manufacturer produces several models of similar units with different parameters. Popular today models under the brand name they have a great price, they are compact, have an ergonomic design and are absolutely silent. Each model is powered by a voltage of 220 the water pressure in the water supply goes directly under

Mechanical seal R-BT-FN/BT-FN.NU

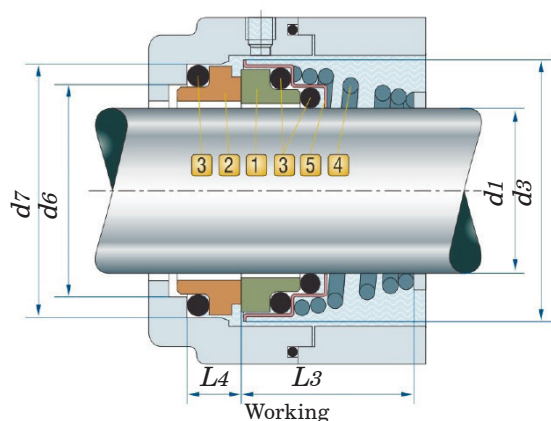

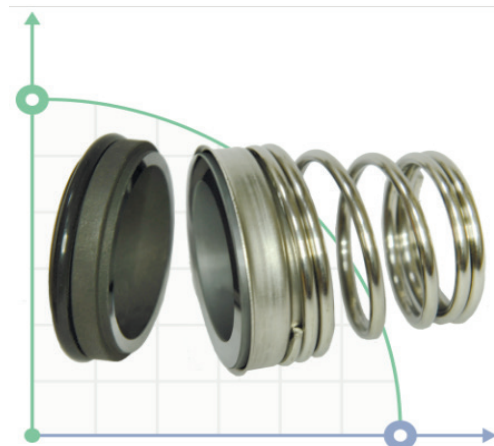

Temperature: $-20^{\circ}\sim 180^{\circ}$

Pressure: ≤ 1.4 mPa

Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: Ceramic / SIC / TC.
- 2 Stationary ring: Carbon / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

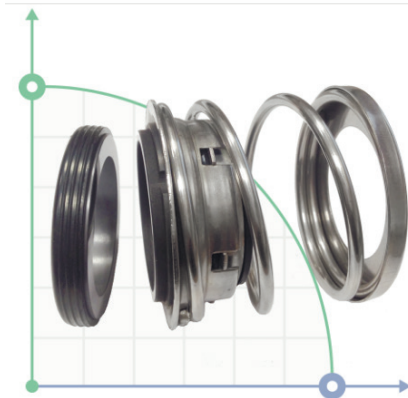

Mechanical seal R-BT-FN.

It can be used in pumps: Lowara (CEA120), Calpeda (NM, MXH, MPC, GXC/GXV), Ebara (CDX, 2CDX, CDXM), Pedrolo (F) and many others.

Analog of mechanical seals: Burgmann BT - FN, Roten 3, Vulcan 13. DIMER TCO.15-7, Lidering

Type of counter ring

Mechanical seal R-560C/BIA

It is applied to pumps of the Haigh, Hidrostral, Hilge, Inbeat, INOX series and so on.

Analogue: Burgmann MG920/ D1-G50 seal. Crane 2 (N SEAT) seal. Flowserve 200 seal Latty T200

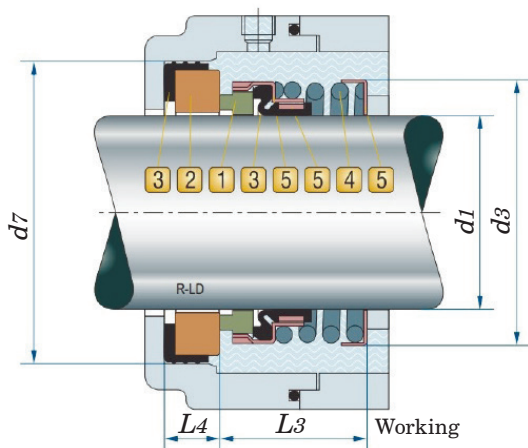

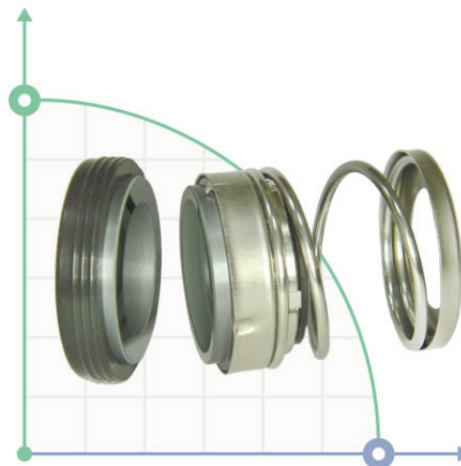

Mechanical seal R-560A

Temperature: $-20^{\circ}\sim 150^{\circ}$
Pressure: ≤ 1.5 mPa
Speed: ≤ 13 m/sec

Materials

- 1 Rotary ring: Carbon / SIC .
- 2 Stationary ring: Ceramic / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Mechanical mechanical seal R-560A

The seals are capable of self-regulation due to the freely inserted movable ring, as well as the high axial mobility of the bellows. the R-560A end seals adapt themselves to shaft deflections and misalignments.

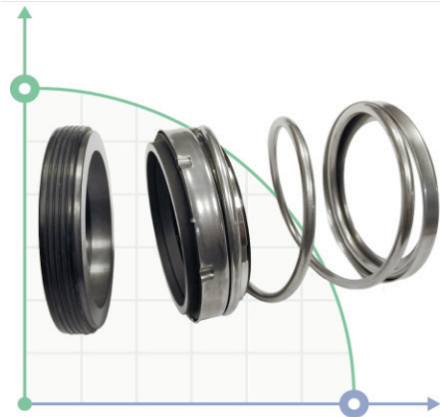

Areas of application: processing and chemical industry, water supply and wastewater treatment systems, glycols oils, submersible pumps, motor pumps, circulation pumps.

It is applied to pumps of the Haigh, Hidrostal, Hilge, Inbeat, INOX series and so on.

Analogue: EA560A Burgmann, John Crane 6, AESSEAL B04

Type of counter ring

Mechanical seal R-31K/31U

It is applied to pumps of the Haigh, Hidrostal, Hilge, Inbeat, INOX series and so on.

Analogue: Burgmann MG920/ D1-G50 seal, Crane 2 (N SEAT) seal, Flowserve 200 seal, Latty T200 seal, Pac type 21/31 (UK standart, US standart), Roplan RB02, Roten 21, Sterling 212, Vulcan 20.

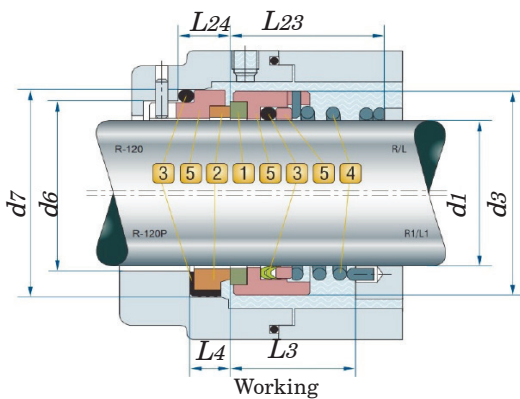

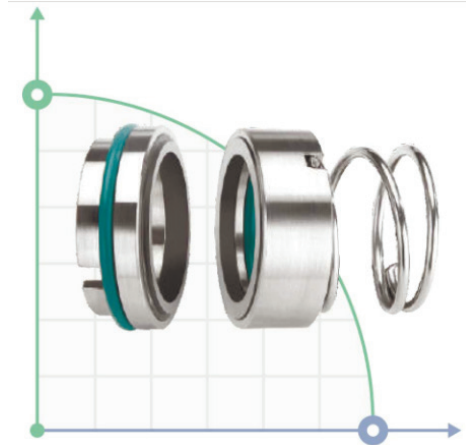

Mechanical seal R-120/120P

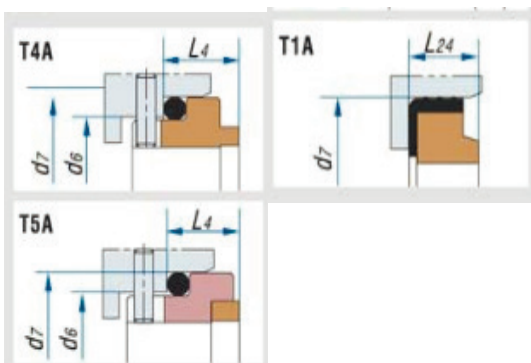

Temperature: $-40^{\circ}\sim 180^{\circ}$
Pressure: ≤ 1.4 mPa
Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: SIC / TC.
- 2 Stationary ring: Carbon / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Type of counter ring

120	151	140,5	152	126	21	

Type of counter ring

Single mechanical end seal R-JB103 with a central spring regardless of the direction of entry.

Application in pumps Wilo, ABS, Alfa laval, Allweiler, APV, Calpeda, DAB, Ebara, EMU, Flugt, Fristam.

Analogue of mechanical seals: John Crane, Burgmann, AESSEAL, Latty, Roplan, Roten, Sealol, Sterling.

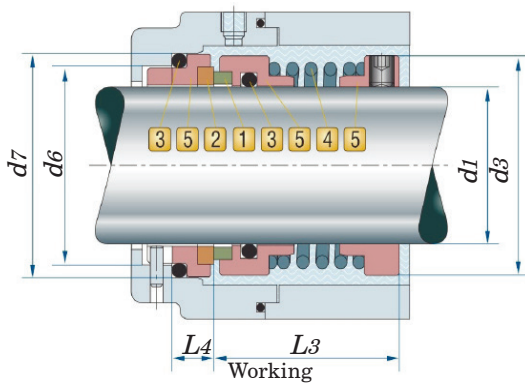

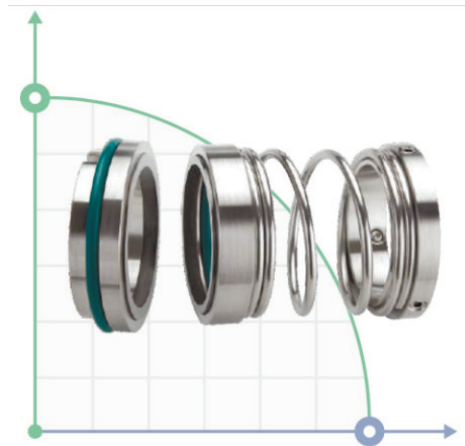

Mechanical seal R-1527

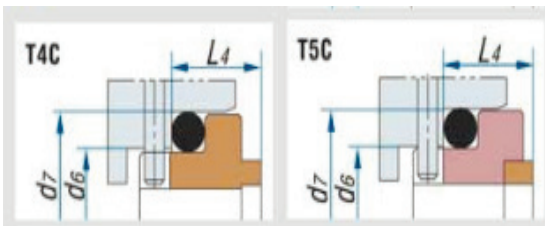

Temperature: $-20^{\circ}\sim 150^{\circ}$
Pressure: ≤ 1.0 mPa
Speed: ≤ 10 m/sec

Materials

- 1 Rotary ring: SIC / TC.
- 2 Stationary ring: Carbon / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304.
- 5 Metal parts: SS304.

Type of counter ring

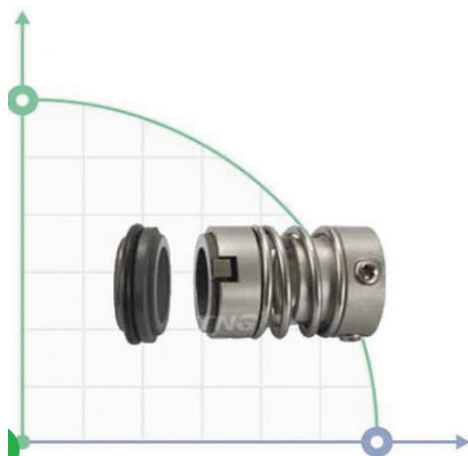

Single mechanical seal R-1527

Is applicable to the series pumps: MDM, DAB DIVERTRON, DIVER, MICRA HS, IDEA, D-SUB and so on.

Analogue: Vidmap to MG912/ D1-G60 seal, Crane 521 seal Flowserve 240 seal, Latty

Pumps for carbomide-ammonium mixtures

Carbomide-ammonium mixtures are an explosive and fire-proof fertilizer, so it can be transported using electric pumps with a motor in general purpose industrial version, however, the flow part of such pumps must be made of a material resistant to ammonia and nitric acid derivatives. These materials are stainless steel and plastics (PP, PVDF). For pumping ready-made carbomide-ammonia mixtures, our company offers pumps with a stainless flow part for CAM — a mixture of aqueous solutions of ammonium nitrate and urea (in the ratio of 35.4% urea, 44.3% saltpeter, 19.4% water, 0.5% ammonia water). The density of the product up to 1.34 kg/m³. The only nitrogen

fertilizer that contains three forms of nitrogen: nitrate - provides instant action of ammonium nitrification process is transferred in the form of nitrate, amide - as a result of activities changes in soil microbial ammonium form and then to nitrate. Thus, the CAM provides prolonged nutrition of plants with nitrogen. Due to the absence of free ammonia in the CAM composition, it does not evaporate into the atmosphere when applied, but the presence of an ammonium form still makes minimal sealing desirable, especially in the conditions of temperatures and the absence of precipitation after application.

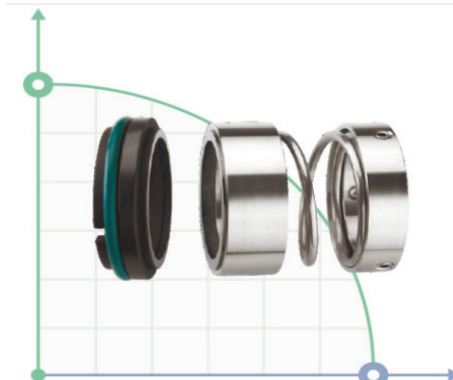

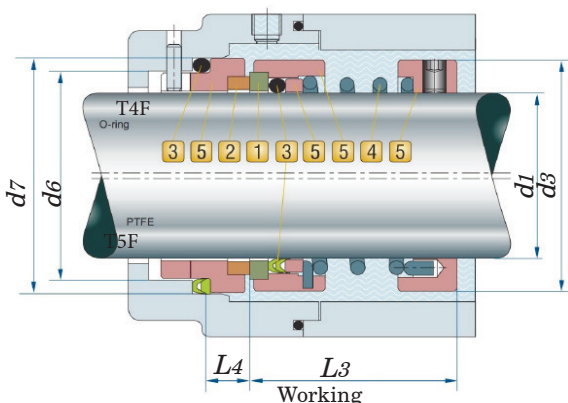

Mechanical seal R-108U

Temperature: $-20^{\circ}\sim 150^{\circ}$
Pressure: ≤ 0.6 mPa
Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: SUS / SIC / TC.
- 2 Stationary ring: Carbon / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON/PTFE.
- 4 Spring: SS304.
- 5 Metal parts: SS304.

Pumps for sewage pumping stations

Sewage pumping stations are designed for pumping household, drain and industrial waste water, when transportation of liquids is not possible. sewage pumping stations helps to optimize and reduce the cost of materials and construction and installation work, allows you to use pipes of smaller diameter in pressure pipelines than in somatic collectors, which in turn allows you to reduce the final cost by two or three times.

The pumps for sewage stations. The height of sewage pumping stations is dialed from 1.5 m to the required height by the customer and consists of pipes D 1200 mm - d 3000 mm, which are made of concrete class B-30, B-35, waterproof w6 and w8, frost-resistant F100, equipped with an internal polyethylene liner

(PE80), which improves the waterproofing properties of structures and extends their service life
To select the optimal variant of the sewage pumping station, you must define: the depth of laying the supply manifold; the required capacity and pressure; the volume of waste water that enters the pumping station; the type of pumped liquid; conditions of hydrogeology of construction

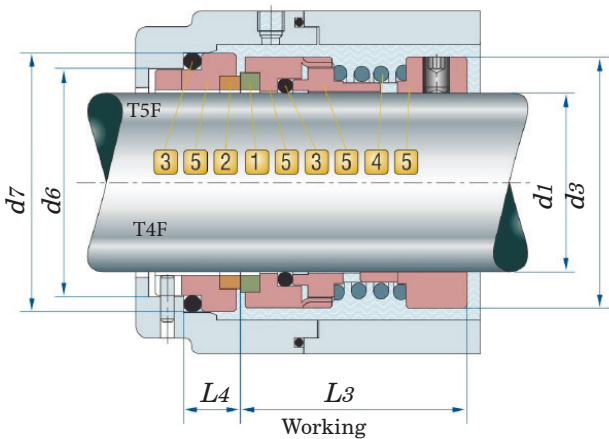

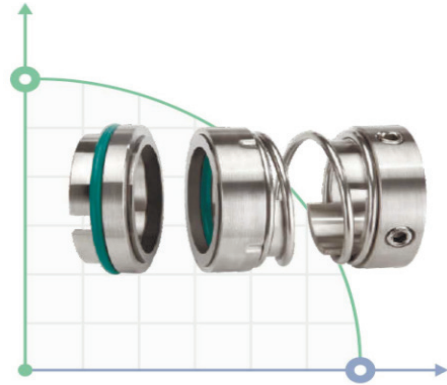

Mechanical seal R-112

Temperature: $-20^{\circ}\sim 140^{\circ}$
Pressure: ≤ 1.4 mPa

Pumps for mash wort, distillery dreg, brew

Pumps for distillery dreg and brew made of stainless steel. IHG and SM centrifugal pumps have performed well in the alcohol industry, namely for pumping distillery dreg and brew. IHG series pumps for distillery dreg and brew are equipped with an explosion-proof engine according to the Ex dIIBT4 standard, which allows them to be used in industrial premises of the corresponding category of explosion and fire hazard. The pump motor is standard asynchronous, placed vertically, which prevents the engine from filling with the pumped liquid in emergency situations. Besides,

IHG series pumps for distillery dreg and brew are equipped with an explosion-proof engine according to the Ex dIIBT4 standard, which allows them to be used in industrial premises of the corresponding category of explosion and fire hazard. Pumps of this series are used for pumping liquids that are not aggressive for the materials of which the pump is made and do not contain abrasive impurities. These pumps are widely used in the oil, chemical, metallurgical, electrical, paper, and medical industries.

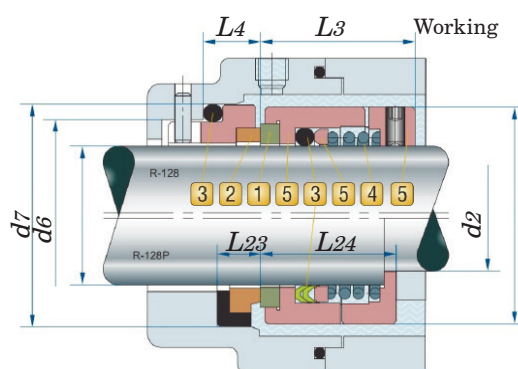

Mechanical seal R-128/128P

Temperature: $-20^{\circ}\sim 200^{\circ}$
Pressure: ≤ 0.8 mPa

Type of counter ring

Single mechanical end seal R-124

Is applicable to the series pumps: SPERONI, Hydrostal, Grundfos. It is used at temperatures from -40 to $+ 120$ degrees Celsius, with a pressure of up to 1.2 MPa and a rotation speed of up to 15 m / sec.

Analogue: Burgman, Aesseal , Roten.

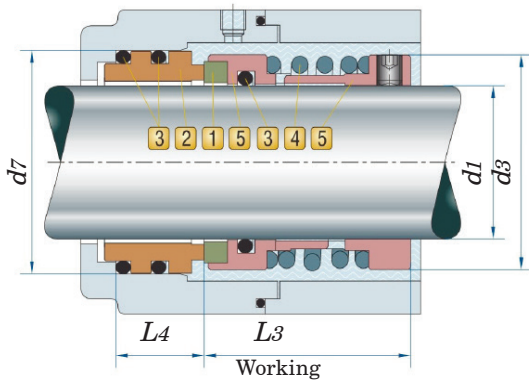

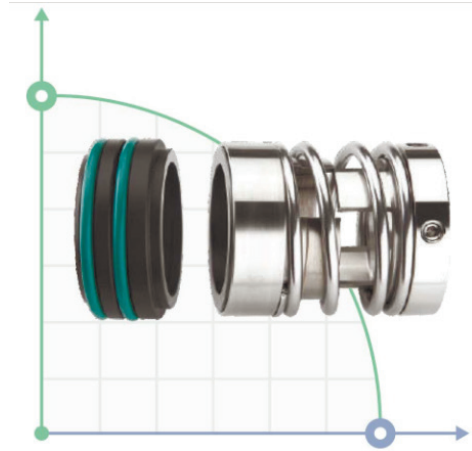

Mechanical seal R-125

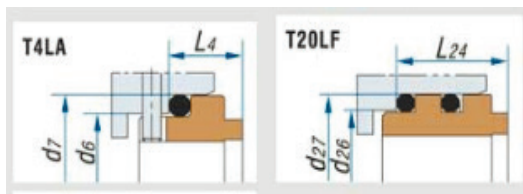

Temperature: $-20^{\circ}\sim 180^{\circ}$
Pressure: ≤ 1.2 mPa
Speed: ≤ 25 m/sec

Materials

- 1 Rotary ring: SIC / TC.
- 2 Stationary ring: Carbon / SIC .
- 3 Bellows: NBR / EPDM / VITON / MVQ.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

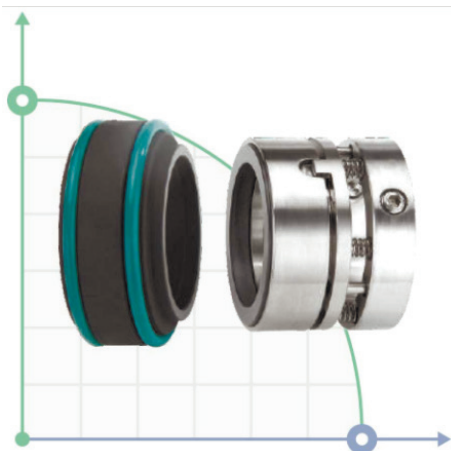

Type of counter ring

Single mechanical seal R-125
Is used in centrifugal, sludge, and chemical pumps.

Type of counter ring

Single mechanical end seal R-960

Is applicable to the series pumps:
centrifugal, food, submersible etc.

Analogue: Burgman, Aesseal , Roten.

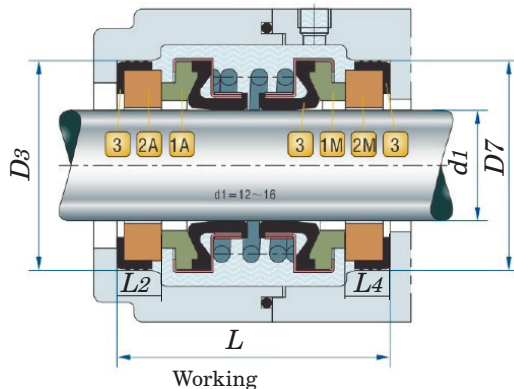

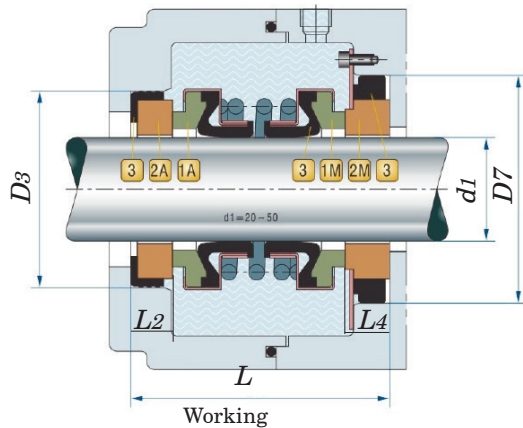

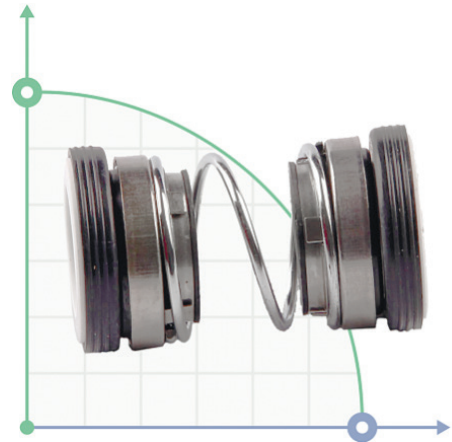

Mechanical seal R-560D

Temperature: $-20^{\circ}\sim 80^{\circ}$
Pressure: ≤ 0.3 mPa
Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: Carbon / SIC.
- 2 Stationary ring: Ceramic/SIC.
- 3 Bellows: NBR/VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

50	72	80	69	10	9

Mechanical seal R-560D

It is used in drainage and sewage pumps.

Analogue: EA560D Burgmann, John Crane 6, AESSEAL B04

The double end seal is an **analogue of the Burgmann seal** and fully corresponds to it in terms of technical characteristics, quality and reliability.

This type of seal is used in pumps, compressors, equipment for the food and chemical industries, etc. - that is, wherever it is necessary to provide high-quality sealing of rotating shafts.

High reliability of the double face seal is provided by the design of the unit with two seals – primary and secondary. The main lubricant for the assembly operation is the product itself, which is used by the equipment.

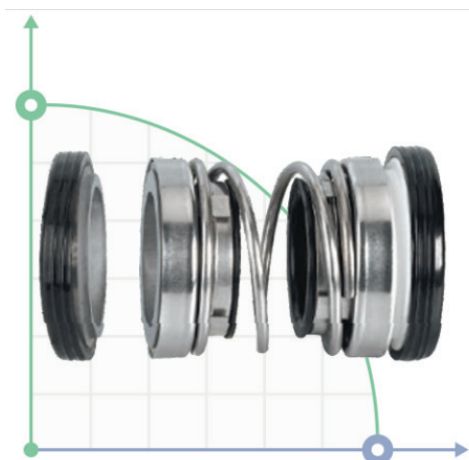

Mechanical seal R-202/208

Temperature: $-20^{\circ}\sim 80^{\circ}$
Pressure: ≤ 0.16 mPa
Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: Carbon / SIC / TC.
- 2 Stationary ring: Carbon / Ceramic/ SIC / TC.
- 3 Bellows: NBR / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Type of counter ring

Single mechanical seal series R-59U, R-58U

Is applicable to the pumps of Ebara, Lowara, Colfax, Houttuin series .

Analogue: John Crane T109, T9, T909 seal Roten 90 seal Sealol T seal Sterling 290 seal, Vulcan 1659.

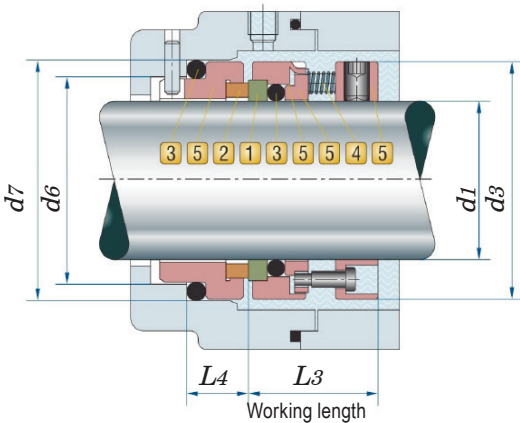

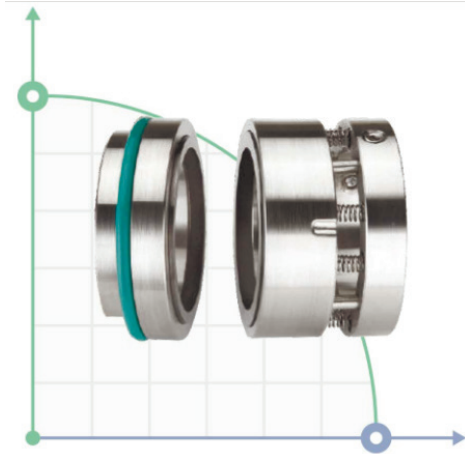

Mechanical seal R-102U

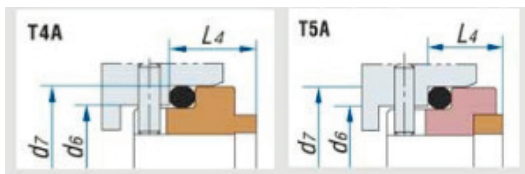

Temperature: $-30^{\circ}\sim 180^{\circ}$
Pressure: ≤ 1.2 mPa
Speed: ≤ 10 m/sec

Materials

- 1 Rotary ring: SIC / TC.
- 2 Stationary ring: Carbon / SIC / TC.
- 3 Bellows: EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Type of counter ring

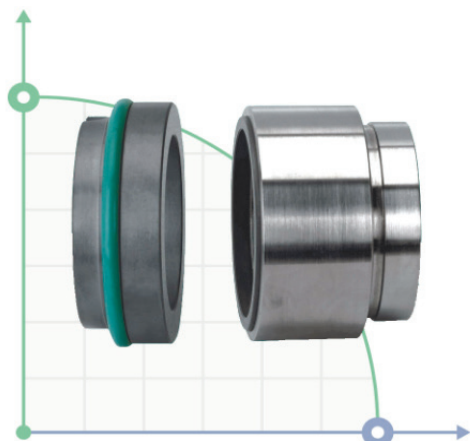

Single end seal R-120U

It is used in pumps of the Sarlin, Tuchenhagen, Hilge, HM, HMS series and so on. It is used at temperatures from -40 to $+120$ degrees Celsius, with a pressure of up to 1.2 MPa and a rotation speed of up to 10 m / sec.

Analogue: John Crane T109, T9, T909 seal Roten 90 seal, Sealol T seal, Sterling 290 seal.

Type of counter ring

Single end seal R-HJ92N

It is used for Alfa Laval, Ebara (3M, DWO), Lowara, KSB (Etanorm, Etachrom), WILO (MVI, MHI, IPL/DPL), Grundfos (CDM), Saer (IP), and (IP), Calpeda (GM, MXS), Hecker HN 410SU pumps.

Analogue: SHJ97 Burgmann HJ92N seal, Roten seal EHS3, AESSEAL MO10.

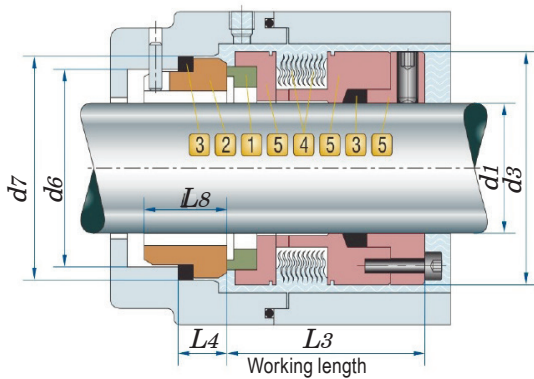

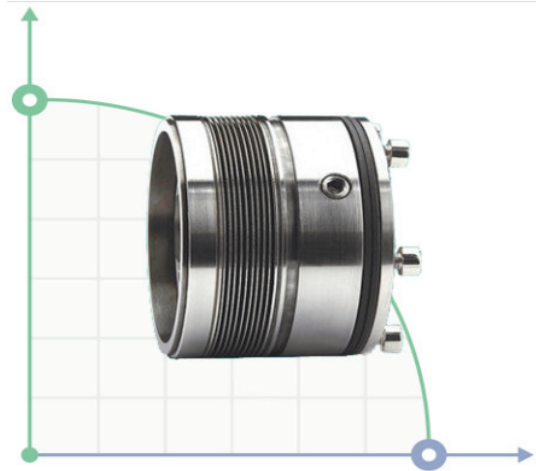

Mechanical seal R-606

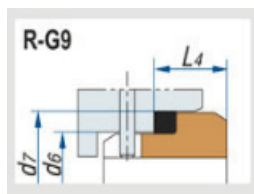

Temperature: $-20^{\circ}\sim 400^{\circ}$
Pressure: ≤ 2.5 mPa
Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: Carbon/ SIC / TC.
- 2 Stationary ring: SIC / SUS / TC.
- 3 Bellows: M6 / T6.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Type of counter ring

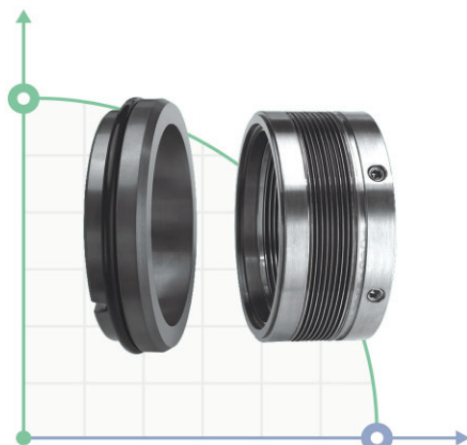

Mechanical end seal R-606 with metal welded bellows.

Used in pumps: Lowara, Ebara (3M), EMU, Flugt, Fristam, GEA Tuchenhausen, Goetze, etc.

Analogue: Burgmann MBS100, MFLWT 80, MFLCT.

Type of counter ring

Single mechanical end seal R-109/R-8U

The mechanical seals of this series have a compact structure and high resistance to aggressive media.

Analogue: John Crane 109, 8-1, Asseal.

Mechanical seal R-58B/59B

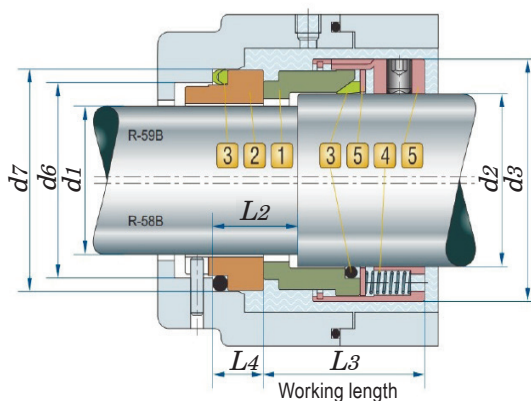

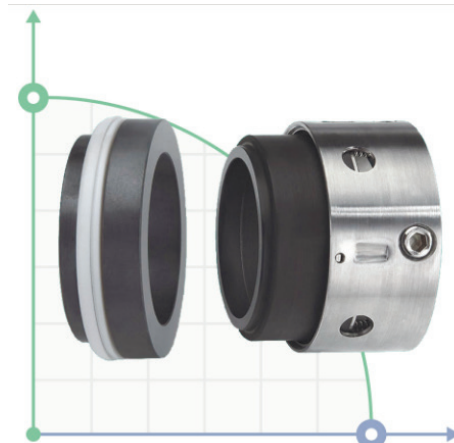

Temperature: $-40^{\circ}\sim 200^{\circ}$

Pressure: ≤ 2.5 mPa

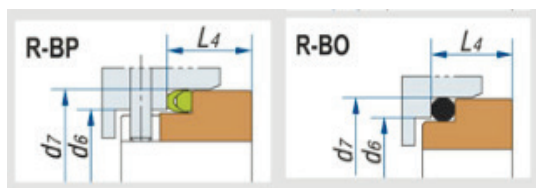

Speed: ≤ 25 m/sec

Materials

- 1 Rotary ring: Carbon / SIC / TC.
- 2 Stationary ring: SIC / TC / SUS .
- 3 Bellows: EPDM / VITON / PTFE.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

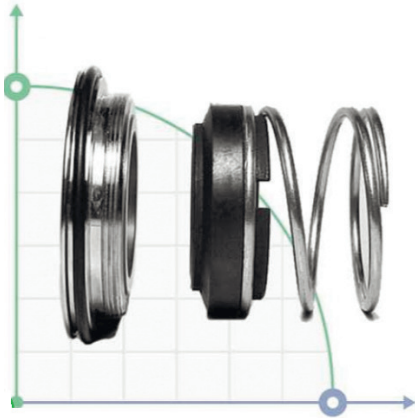

Type of counter ring

Single mechanical seal of R-59B, R-58B series is applied to the pumps of the following series: Ebara, Hidrostat, Godwin and so on.

Analogue: John Crane T109, T9, T909 seal Roten 90 seal , Sealol T seal, Sterling 290 seal.

Mechanical seal R-AL

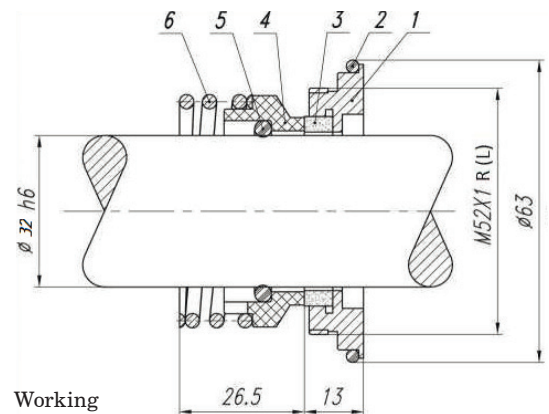

Temperature: $-20^{\circ}\sim 150^{\circ}$
Pressure: ≤ 0.6 mPa
Speed: ≤ 15 m/sec

Materials

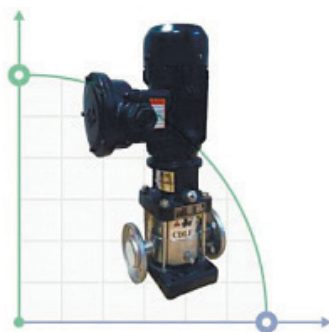

- 1 Rotary ring: Carbon
- 2 Stationary ring: SIC / TC.
- 3 Bellows: EPDM .
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Single mechanical end seal R-AL

Application in ALFA LAVAL LKH Series pump
Analog: AESSEAL T07 / T07D / T07X, Burgmann M2N,
Roten UNITEN 22, Hecker HN 400A.

Pumps for alcohol

The pumps in this series are made of Ex explosion-proof equipment. Explosion protection of electrical equipment is based on the principle of cooling the explosion products and limiting the flame by means of gaps to a temperature at which the ignition of an explosive mixture located outside the equipment shell is excluded. The main enterprises that have explosive zones are petrochemical, chemical, oil refining, wood processing, paint and varnish, production and transportation of powdered sugar, wood flour, and coal dust. Designed for: increasing the pressure in the existing liquid supply system, which requires an explosion-proof version of the pump unit, the EX version of

the pump.

The impeller that guides the impeller and all parts that come in contact with the liquid are made of stainless steel by stamping and casting, which means that the flow path is smooth and prevents contamination. The shaft and coupling are made of high quality hard alloy and have an end seal that serves for a long time and does not leak. Multistage pumps are made of stainless steel. Reliable, silent and easy-to-operate pumps are used in municipal, industrial and agricultural facilities. For example, in fire extinguishing systems, booster systems, water treatment systems, irrigation systems

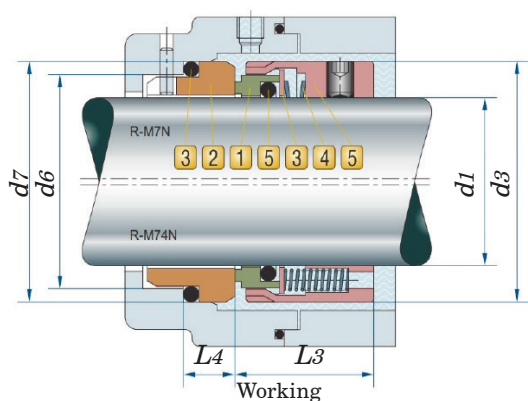

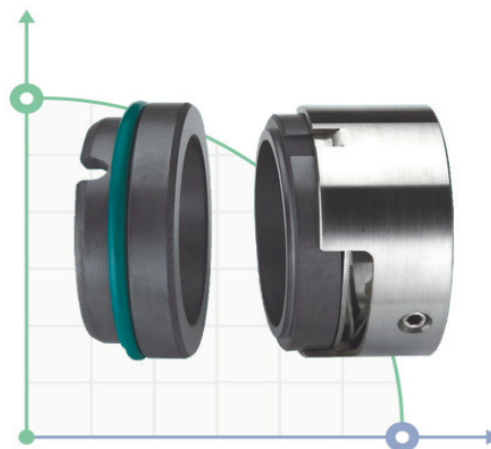

Mechanical seal R-M7N/M74N

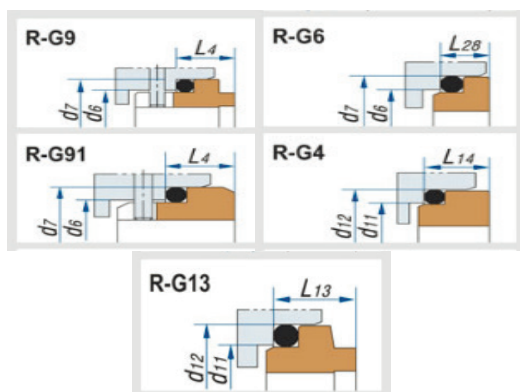

Temperature: $-20^{\circ}\sim 200^{\circ}$
Pressure: ≤ 1.6 mPa
Speed: ≤ 20 m/sec

Materials

- 1 Rotary ring: Carbon / SIC / SUS.
- 2 Stationary ring: Carbon/SIC/SUS.
- 3 Bellows: EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Type of counter ring

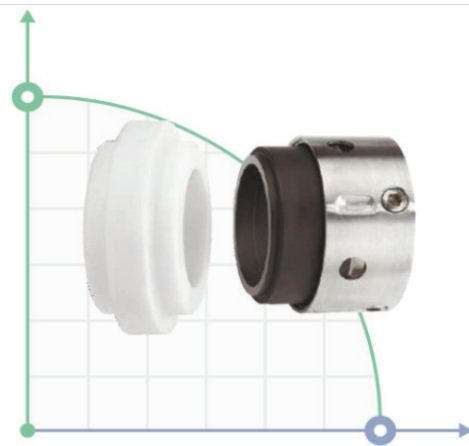

Single mechanical seal R-M7N / M74N

Used in pumps: Lowara, Ebara (3M), EMU, Flugt, Fristam, GEA Tuchenhausen, Goetze, etc.

Analogue: Burgmann M7N, M74, Aesseal W07DM, W07DMB, Vulcan 1677.

PTFE seals are designed for use in extremely aggressive environments: strong acids, organic compounds, salt solutions, and chemically active compounds.

- **The mechanical seal design** prevents slipping on the shaft and premature wear.
- **Flexible PTFE bellows design.** Maximum corrosion resistance. Eliminates the possibility of misalignment of the bellows.

Pneumatic diaphragm pumps

Pneumatic diaphragm pumps are designed for pumping abrasive, shear-sensitive and high-viscosity liquids. Perfectly cope with heavy and flowing liquids. Buy pneumatic diaphragm pumps for pumping chemical, food, pharmaceutical and cosmetic liquids and explosive atmospheres. By contacting our specialists, you will get a high-quality selection of a pneumatic diaphragm pump and consultation. We will be happy to help with the solution! Phoenix series of pneumatic diaphragm pumps manufactured by the Italian company FLUIMAC is represented by a wide range of models for solving production tasks of any complexity. PHOENIX membrane pumps, with an innovative air distribution system, pump chamber geometry and valve system, allow pumping a wide range of aggressive products (concentrated acids, alkalis, solvents, varnishes, adhesives, liquids with suspended particles up to 10 mm in size, abrasive products, etc.) with a viscosity from 6000 to 55000 SPZ. THE flow part of Phoe - NIX membrane pumps is made of materials such as PVDF, Alu, POMc, PP, and AISI316. The main working elements (membranes, ball valves, valve seats) are made of PVDF, Alu, POMc, PP, AISI316, PTFE, NBR, PE, SANTOPRENE, HYTREL.

Pneumatic diaphragm pumps

Fluimac Phoenix series diaphragm air pumps are low-cost pumps manufactured in Europe. They allow you to pump not only clean, but also aggressive, abrasive, sticky and viscous media. Like other diaphragm pumps, they do not have an electric motor and are powered by compressed air energy. The performance of the models is regulated by the air consumption of the connected compressor. Pumps are represented by P7 models-18-30-50- 65-100-160-250-500-700 certified according to strict industry standards, including ATEX. They have a classic two-membrane design with two peripheral working cameras. Fluimac Phoenix, among other membrane pumps, is favourably distinguished by economy prices, on the background of its

high technical indicators. Fluimac positions the Phoenix range as an innovative new-generation product. For example, P7 - 18-50 pumps are equipped with an internal pneumatic exchanger, this is when a single air valve controls the supply of air to the diaphragms. A on p models-65-100-160-250-500-700 a two-way air valve (external air exchange) is installed, which controls both the supply and the flow

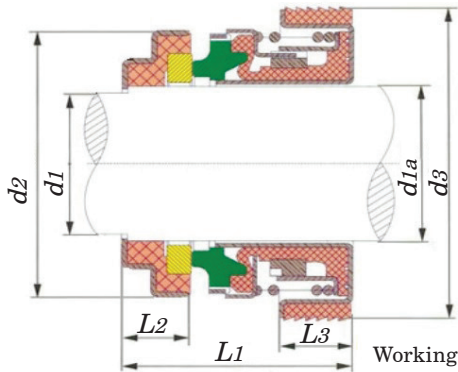

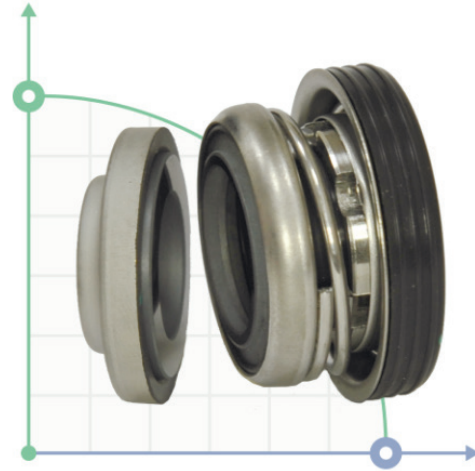

Mechanical seal R-LPS

Ex Pumps

Ex pumps are designed for pumping flammable, aggressive, toxic, explosive, easily volatile liquid in petrochemical and chemical industries, most often in the environmental industry. Used in the manufacture of solvents, alkalis, acids, paints and varnishes. In its design, it has a shielded motor and a spiral body. It is made of lined or stainless steel; a chemically resistant polymer, rubber, and other material with increased chemical inertness, to avoid reacting with the pumped mass. The series has a built-in explosion protection system and it is manufactured in accordance with European ATEX certificates and has been designed to be particularly suitable for heavy-duty vehicles, i.e. for those demanding fleets that need to distribute fuel such

as petrol, diesel or kerosene quickly. Very important accessories are available for the entire line of new EX pumps, including: remote control kit, for remote control of an electrical unit with a nozzle connection, and mounting feet that are compatible with many applications.

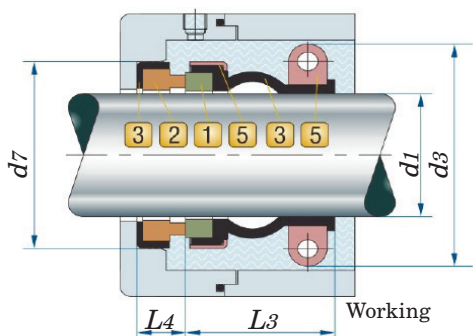

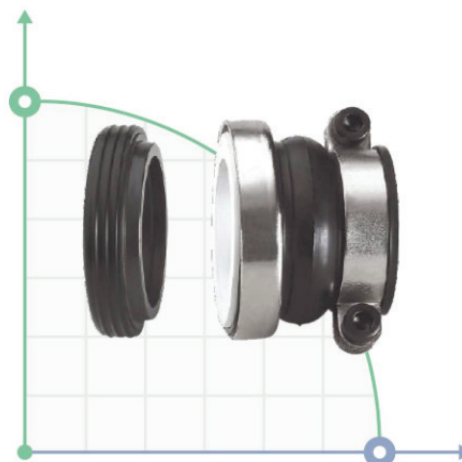

Mechanical seal R-XB

Temperature: $-20^{\circ}\sim 120^{\circ}$
Pressure: ≤ 0.4 mPa
Speed: ≤ 3000 rpm

Materials

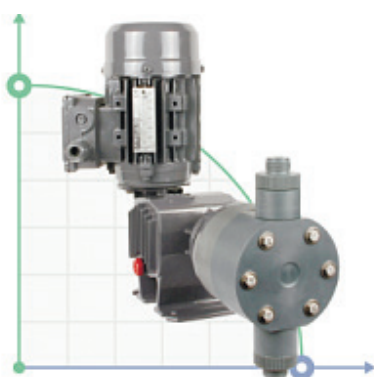

- 1 Rotary ring: Ceramic / SIC .
- 2 Stationary ring: Carbon / SIC .
- 3 Bellows: NBR / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Plunger pump

Plunger pumps-metering pumps, one of the types of volumetric pumps, the displacing body in which the plunger makes a reciprocating motion. The pump body is made of cast aluminum, protected by epoxy, anti-acid paint.

The pump performance is controlled by a micrometer knob that controls the length of the plunger stroke. The performance can be adjusted while the pump is running. The pump is driven by a vertically positioned motor. The transmission operates on the principle of idling (return of the piston

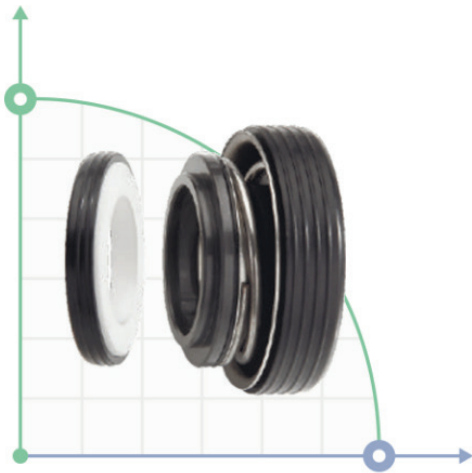

occurs by means of a return spring). Standard versions:

- Configuration AA / AISI-pump head-n / St AISI 316L, O-ring-NBR,

plunger-n/St AISI 316L

- AP configuration-pump head - n / St AISI 316L, O-ring-FPM, plunger-n/St AISI 316L

- BA / PVC configuration-pump head-PVC, O-ring-FPM, plunger-Ceramic These new series have been fully developed, designed and manufactured using only high-quality materials that are manufactured in Italy using cutting-edge CAD design.

Mechanical seal R-6SB/SB

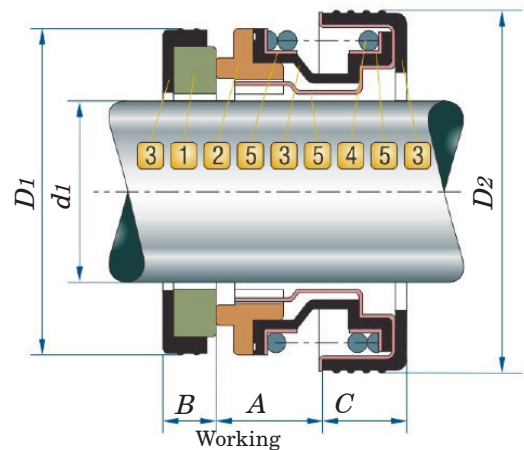

Temperature: $-20^{\circ}\sim 100^{\circ}$
Pressure: ≤ 0.3 mPa

Diaphragm pumps

Diaphragm pumps-volumetric dosing pumps, the working body of which is a flexible membrane fixed at the edges. Membrane pumps creates a low pressure, used for dosing chemicals. The pump body is made of cast aluminum, protected by epoxy, anti-acid paint.

The pump performance is controlled by a micrometer knob that controls the length of the plunger stroke. The performance can be adjusted while the pump is running. The pump is driven by a vertically positioned motor. Box

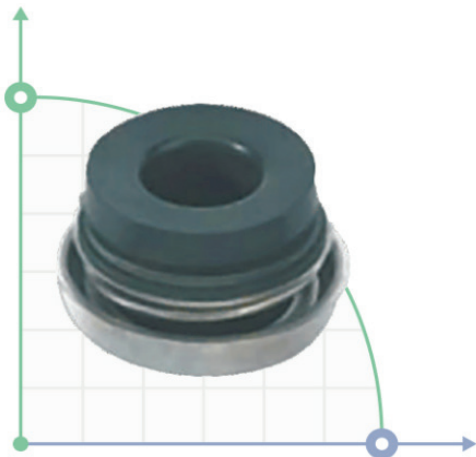

the transmission operates on the principle of idling (the return of the piston occurs using the return spring).Standard versions:

- Configuration AA / AISI-pump head-n / St AISI 316L, O-ring-NBR,

plunger-n/St AISI 316L

- AP configuration-pump head-n / St AISI 316L, O-ring-FPM, membrane-PTFE.

- BA / PVC configuration-pump head-PVC, O-ring-FPM, membrane-PTFE.

Mechanical seal R-6CK-16

Temperature: $-20^{\circ}\sim 100^{\circ}$
Pressure: ≤ 0.3 mPa
Speed: ≤ 5000 rpm

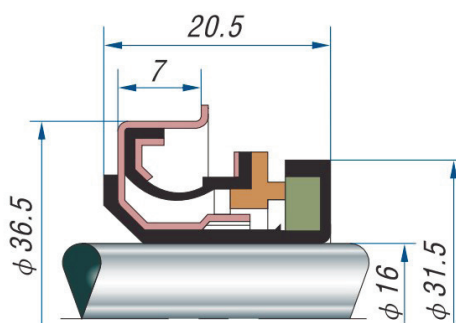

Materials

- 1 Rotary ring: Ceramic/Sic
- 2 Stationary ring: Carbon/Sic
- 3 Bellows: NBR .
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Mechanical seal R-6CK16

Be applicable to pumps for pumping water, oil and middle corrosive environments, and so on.

Analogue: Burgmann, John Crane, Roten, AESSEAL, Anga, Vulcan, Lidering, DIMER, Flowserve.

Valve plate EDV

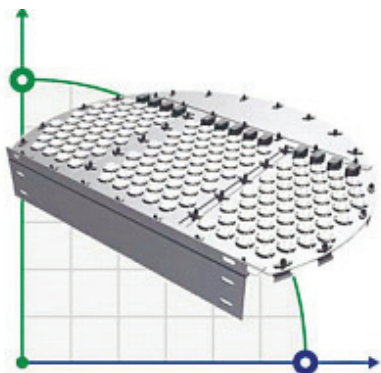

Plate contact devices of rectification and absorption devices are classified:

- by the number of flows - - by the types and design of contact elements; - by the nature of the interaction of phases in the contact zone;
- on the organization of liquid overflow, etc.

According to the number of threads (drains), plates perform one -, two -, and multithreaded. They also use multi-spillage plates with evenly distributed plums and plates with a cascading arrangement of the web.

Multithreaded and multi spillage plates are used in large diameter

columns and at significant costs

liquids. These plates provide a more uniform liquid level and vapor distribution over the area of the contact devices.

Depending on the direction of movement of the steam and liquid phase, in the contact zone, direct-current, counter-current, and cross-current plates are distinguished.

According to the organization of liquid overflow, plates are divided into overflow and non-overflow (failure type).

According to the type of contact elements, the plates are divided into:

- caps (with capsule and tunnel caps); - with S-shaped elements; - strainers with rebound elements; - strainer-valve; - valve (single-and double-flow);
- valve ballast; - latticed;-louver-valve; - jet-directed (scaly).

Hydroponics

Metering control stations for hydroponic systems. Hydroponics is a method of growing plants in artificial environments without soil. Plant nutrition is obtained from a nutrient solution prepared from nutrients by dosing pumps of a particular substance and nutrients. Hydroponics allows you to regulate the growing conditions of plants to create a diet that fully meets the needs of plants in nutrients. Metering control stations for hydroponic systems the root system of plants is developed when growing them using the hydroponic method on solid substrates that have no nutritional value, in water or in humid air Aeroponics. An example of an organic substrate is coconut fiber: this is ground coconut shell and bast from which the iron and magnesium salts are washed. In the natural environment, coconut fiber serves as the initial soil for the roots of a newborn palm tree. Coconut fiber is lighter than water, so when watering, it does not sink like a soil soil, but swells, filling with air. Each fiber contains a large number of pores and tubules in its thickness. By the force of surface tension, the tubules are filled with a working solution, but the root hair drinks the contents, sprouting nearby. The smooth surface of the fiber allows the root to slide freely from the drunk to the next.

magnesium salts are washed. In the natural environment, coconut fiber serves as the initial soil for the roots of a newborn palm tree. Dosing systems for swimming pools

Automatic dosing and control systems for swimming pools

Problems of disinfection of water in swimming pools

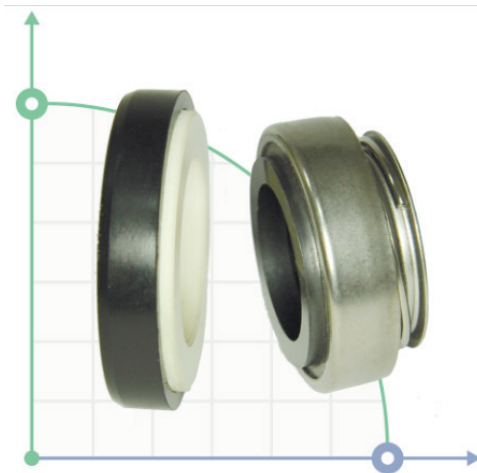

Sodium hypochlorite makes the water alkaline, soapy to the touch, and people who have bathed in this water will dry their skin and redden their eyes. To restore an acceptable $\text{pH}=7.2$, you need to add acid in parallel.

For disinfection of the pool with a volume of 1000 m³ per day, you will need from 30 to 80 liters of 17% hypochlorite. To adjust the pH , you need to use 3 to 20 liters of sulfuric acid. As you know, it is not possible just to

take and pour a canister of hypochlorite and a bottle of sulfuric acid

into the pool. This will be a disaster! Why do I need automatic dosing

The amount of added disinfectants must be strictly dosed. Dosage "by eye" means adding reagents to the pool and manual "test tube" measurement of water parameters in a certain period of time. For professional dosing of disinfection products, pool owners install automatic eTWIN dosing stations - a compact, easy-to-use equipment consisting of two dosing pumps and two controllers for 2 parameters. Controllers can measure chemical values in pools, such as pH , redox potential R_x (mV), or CL chloroform concentration (ppm). The materials used in eTWIN are suitable for dispensing the most popular products used in the pool industry.

Tower packing

Inert ceramic balls d 12 mm are widely used as a catalyst and supporting material of the absorbent layer in the oil refining, petrochemical, gas processing industries and are characterized by incomparably high impact strength, temperature resistance and high crushing strength.

- Bulk density-1380 kg / cubic meter
- Void ratio - to 40%

Available sizes: 1.5 mm, 3mm, 6mm, 10mm, 13mm, 16mm, 19mm, 25mm, 30mm, 38mm, 50mm, 75mm.

Rashig 15 mm ceramic rings are designed to fill the working volumes of packing columns and devices in order to increase the intensity of heat and mass transfer processes in the equipment of chemical, petrochemical, oil refining and other industries, Sewerage and water supply systems, production of ammonia and mineral fertilizers. Rashig ceramic rings are irregular attachments and have a surface 30% larger than cylinders and balls.

Rashig rings are made of carbon steel, stainless steel, PP, PVC, PVDF, and ceramics.

Rashig rings are made of carbon steel, stainless steel, PP, PVC, PVDF, and ceramics.

Metering pumps

Metering pumps are characterized by impeccable quality that meets European standards. The equipment is certified according to the technical regulations of the CU, regulating the safety and electromagnetic compatibility of devices. It is one of the leading suppliers of metering pumps. Metering pumps are widely used in the field of water treatment, as well as in food, chemical, pharmaceutical and other industries. We are a representative of manufacturers of metering pumps, so we offer a full range of products at minimum prices. We also provide services for

maintenance and repair of equipment. Applications: Hypochlorite pump, alkali pump, acid pump, flocculant pump, chemistry pump,

hmic pump, pool pump, water treatment pump, food additives pump, glue pump, additive pump, enzyme pump, sulfate pump, solvent pump. Pumps for calcium hydroxide $\text{Ca}(\text{OH})_2$ (lime milk) acid, aggressive medium, aggressive liquid, chemical solution. lime milk chemical liquid, sulfuric acid pump, hydrochloric acid pump

Pumps for mash wort, distillery dreg

Pumps for distillery dreg and brew made of stainless steel. IHG and SM centrifugal pumps have performed well in the alcohol industry, namely for pumping distillery dreg and brew. IHG series pumps for distillery dreg and brew are equipped with an explosion-proof engine according to the Ex dIIBT4 standard, which allows them to be used in industrial premises of the corresponding category of explosion and fire hazard. Brew pump, wort pump, food pump, abrasive fluid pump, paint pump, acid pump, alkali pump, caustic pump, SIP flushing pump, coagulant pump, oil pump.

IHG series chemical centrifugal pump with a single impeller with a direct motor-pump connection and a common shaft. The pump body has a suction and delivery bell of the same diameter and located on the same shaft. This feature makes it very easy to install the pump on the pipeline. The pump motor is standard asynchronous, placed vertically, which prevents the engine from filling with the pumped liquid in emergency situations. In addition, the pumps in this series are equipped with an explosion-proof engine according to the Ex dIIBT4 standard

Pumps for viscous products

For pumping viscous products, including food products, our company offers membrane and gear pumps with a wide range of models. Membrane pumps, with an innovative air distribution system, pump chamber geometry and valve system, allow pumping a wide range of aggressive products (concentrated acids, alkalis, solvents, varnishes, adhesives, liquids with suspended particles up to 10 mm in size, abrasive products, etc.) with a viscosity of 6000 to 55000 SPZ. Gear pumps have a wide range of applications due to their simple design and reliability. Pumps of this type are successfully used for pumping of mineral oils, fuel oils, oil solutions, and gear pumps in stainless steel can pump cream, condensed milk, cheese, meat, syrup,

sourdough bread, vegetable and fruit purees, tomato paste, jam, marmalade, pastry mass, etc. Diaphragm pumps PHOENIX, with its innovative air distribution system, the pumping chambers geometry and the valves allow you to pump a wide range of corrosive substances (strong acids, alkalis, solvents, varnishes, glues) liquids with suspended particles up to 10 mm, abrasive products, etc.) with a viscosity of 6000 to 55000 GPa.

The flow part of Phoenix diaphragm pumps is made of materials such as PVDF, Alu, POMc, PP, and

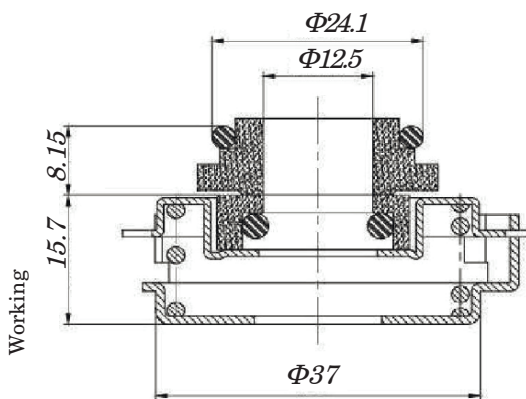

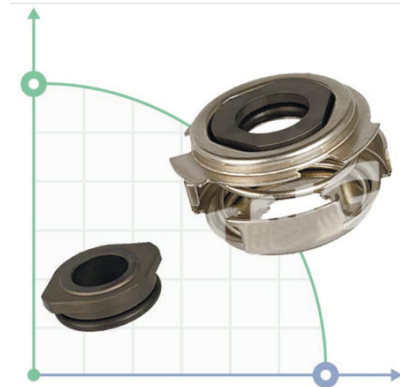

Mechanical seal R-706D

Temperature: $-20^{\circ}\sim 150^{\circ}$
Pressure: ≤ 1.5 mPa
Speed: ≤ 15 m/sec

Materials

Used in Grundfos pumps: CM, CME, CMV
1/3/5/10/15/25 - AQQE/V - 96932392

Grundfos CM mechanical seal

Mechanical seals for Grundfos pumps are used in these types of Grundfos pumps: JP, Ch8, Ch12, CRK (|) 2, CRK (|) 4 series. SPK1, SPK2, SPK4, SPK8 series. Cr2, Cr4 series.

Item number of Grundfos: 96932392 / 96932350.
CM 1/3/5 - AQQE/V-96932392

The CM pump is a compact horizontal pump multistage centrifugal pump with: 1-phase, 220-240 V, 50 Hz, foot-mounted electric motor. Pump with an axial suction channel and a radial outlet channel, including a special design shaft seal in AQQE design. The shaft, impellers, chambers and plugs of the filling holes are made of stainless steel. The suction and discharge pipes are made of Stainless steel.

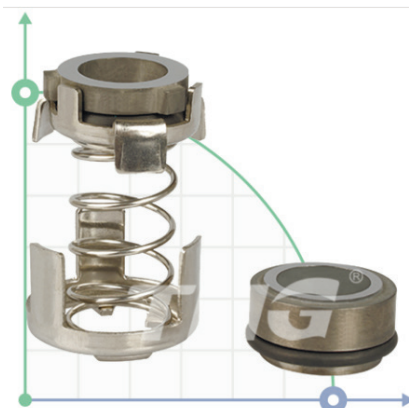

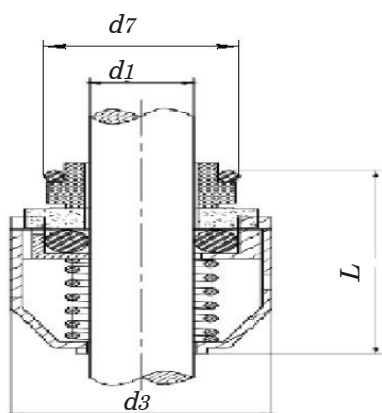

Mechanical seal R-706F

Temperature: $-40^{\circ}\sim 180^{\circ}$
Pressure: ≤ 1.7 mPa

Grundfos pump repair kits, such as shaft seal kit 985167, 985737,

985164, 415080, 69632394.

1. Kit, shaft seal RUUE/V, 985737, suitable for CH, CHV 2, 4, EAN code: 5700392254122

2. Kit, auue/V shaft seal, 985167, suitable for CR(N)2/4, EAN code: 5700392251343

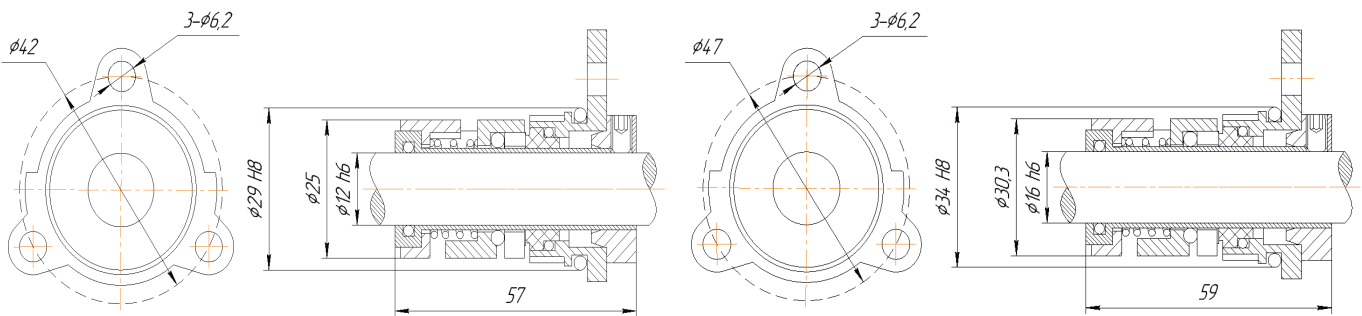

Mechanical seal R-706A

Temperature: $-20^{\circ}\sim 150^{\circ}$
Pressure: ≤ 1.5 mPa
Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: Carbon / SIC / TC.
- 2 Stationary ring: Carbon / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Grundfos CM mechanical seal

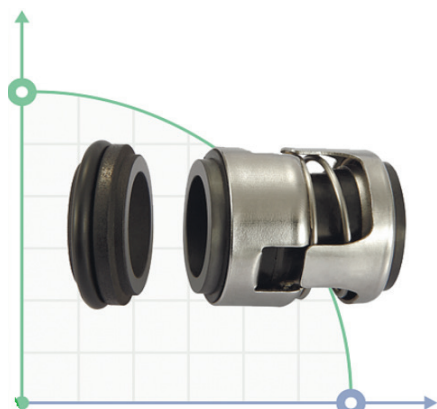

The R-706A mechanical seal is used in Grundfos vertical multistage centrifugal pumps made of stainless steel.

They are suitable for use in Grundfos pumps: Water pump: CR1 / CR3 / CR5 / CR10 / CR15 / CR20 / CR32 / CR45 / CR64 / CR90

Water pump: CRN1 / CRN3 / CRN5 / CRN10 / CRN15 / CRN20 / CRN32 / CRN45 / CRN64 / CRN90

Grundfos Kit, EPDM module for standard pump article: 96509609 is a service kit for repairing Grundfos pumps. You can find detailed information, service videos and details (explosive diagrams) for all Grundfos pump models in the spare parts section. Also, you can always contact us by phone or e-mail for quick selection of spare parts needed to repair the pump. Please note that for the correct selection of spare parts, it is desirable to provide a photo of the pump nameplate

Mechanical seal R-706B

Temperature: $-20^{\circ}\sim 150^{\circ}$

Pressure: ≤ 2.0 mPa

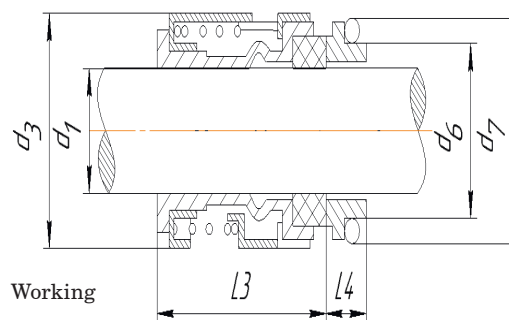

Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: Carbon / SIC
- 2 Stationary ring: Carbon / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304.
- 5 Metal parts: SS304.

It is used in these types of Grundfos pumps: CH, CHI, CHE, CRK, SPK, TP, AP series. CR, CRN, NK, TP series. LM (D) / LP (D), NM / NP, DNM / DNP series.

Grundfos TP mechanical seal

The R-706B mechanical seal is used in Grundfos pumps: CH/CHI / CHE / CRK / SPK / TP APCR / CRN / NK pumps series TP / LM (D) / LP (D) / NM / NP / DNM / DNP pumps series.

Standard shaft size: 12 mm, 16 mm, 22 mm R-706B-12mm: Item number of Grundfos: 96409293 / 96409263 / 00405096 / 00405097.

R-706B-16mm: Item number of Grundfos: 96409265 / 00485351 / 00425062 / 00425063 / 00425063.

The Grundfos pumps of TP, TD series are Designed specifically for pumping working fluids in circulation systems with a constant flow rate. For variable flow systems, models with TPE and TPED frequency converters are used. The standard sizes of these pumps are available in single TP and double TPD versions.

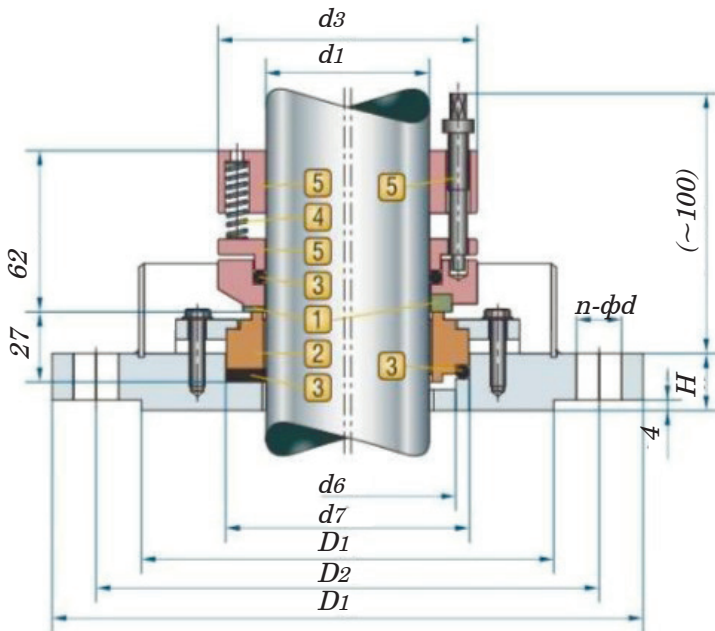

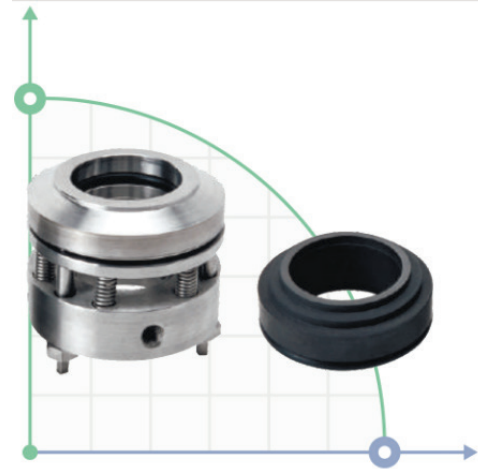

Mechanical seal R-HG202

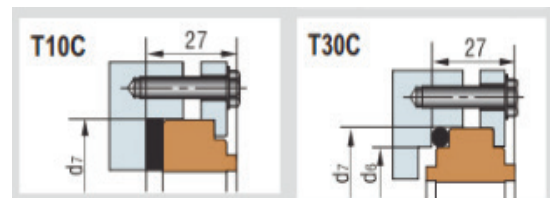

Temperature: $-40^{\circ}\sim 200^{\circ}$
Pressure: ≤ 0.25 mPa
Speed: ≤ 500 rpm

Materials

- 1 Rotary ring: SIC/TC

Mechanical seal R-HG212

Temperature: $-20^{\circ}\sim 120^{\circ}$
Pressure: ≤ 0.5 mPa
Speed: ≤ 500 rpm

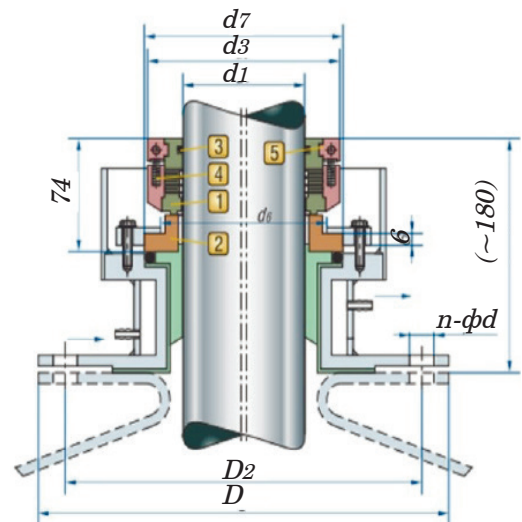

Materials

- 1 Rotary ring: Glass Filled PTFE.
- 2 Stationary ring: Aluminium Oxide/SiC
- 3 Bellows: PTFE
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Single mechanical seal R-HG212

Used in highly concentrated mediums such as acids, alkalis, oil abrasives for reactors and mixers. Fits for chemical, oil processing and pharmaceutical industry.

Is applicable to the Alfa pumps series: Laval, APV, Calpeda, Inoxpa, KSB, Lowara, Grundfos, Hilge, Ebara

Analogue: Burgmann, John Crane, Roten, AESSEAL, Anga, Vulcan, Lidering, DIMER.

Mechanical seal R-TSDC-A03

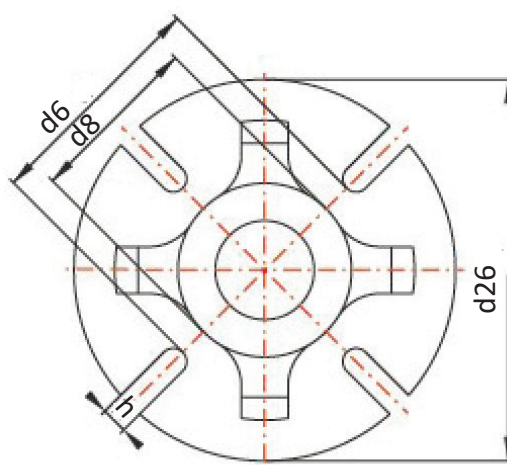

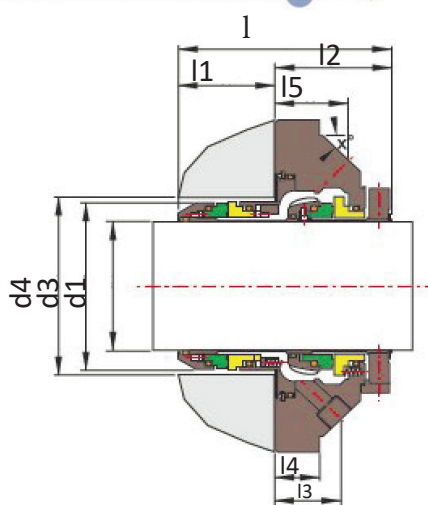

Temperature: $-20^{\circ}\sim 200^{\circ}$

Pressure: ≤ 2.1 mPa

Speed: ≤ 25 m/sec

Materials

- 1 Rotary ring: SIC / TC/CAR.
- 2 Stationary ring: SIC / TC.
- 3 Bellows: PTFE/EPDM/VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Double cartridge mechanical seal R-TSSC-C03

Use at a pressure of up to 4 MPa, a speed of up to 20 m / s and a temperature of -40 degrees Celsius to $+204$ degrees Celsius.

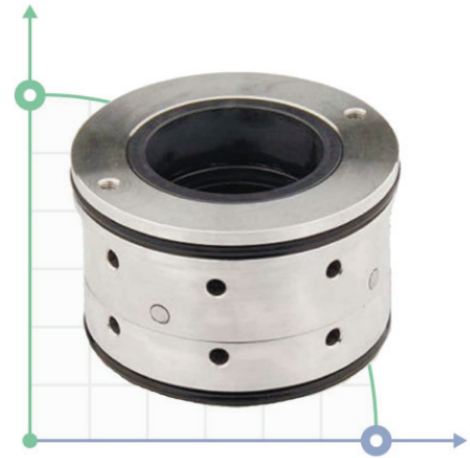

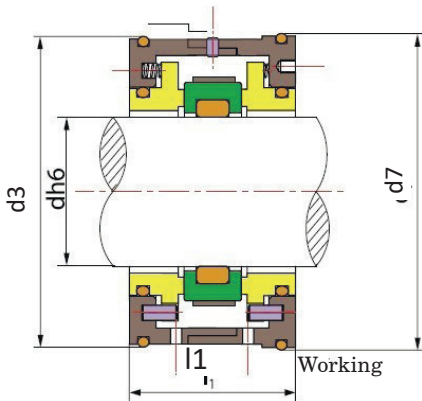

Mechanical seal R-TSWE

Temperature: $-20^{\circ}\sim 200^{\circ}$
Pressure: ≤ 1.5 mPa
Speed: ≤ 20 m/sec

Materials

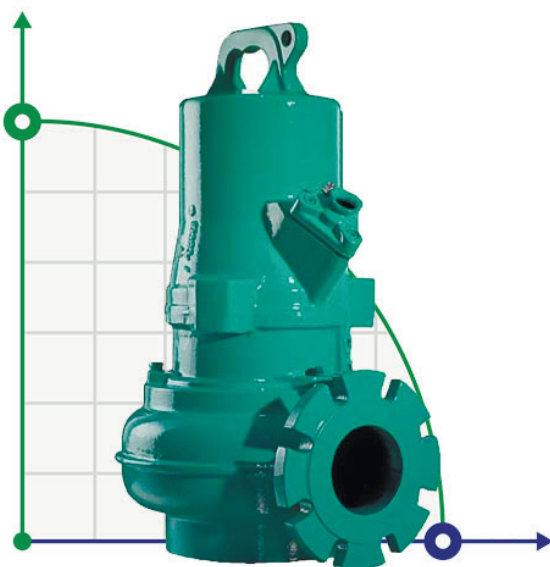

- 1 Rotary ring: SIC / TC.
- 2 Stationary ring: SIC .
- 3 Bellows: NBR / VITON / EPDM.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Mechanical seal WILO - EMU FA

Mechanical cartridge double seal R-TSWE for WILO EMU pump.

replacement seals for Wilo EMU pumps, shaft size: 30mm, 35mm, 40mm, 50mm, 60mm, 75mm

replacement seals for EBS double cartridge seals and s0ecu insert double seal. VGM-2961 6037442

VGM-2962 6037443

VGM-2963 6037444

VULCAN type 1640,1642

Wilo EMU FA is designed as a block unit for stationary and mobile installations in the submerged state. The discharge pipe is horizontal with a flanged connection. There is a possibility to select the impeller, - it can be either a free-swirl (W) or a single-channel working wheel(E). All hydraulic parts with single-blade impellers are equipped with a fixed and rotating ring of a slot seal made of hardened material.

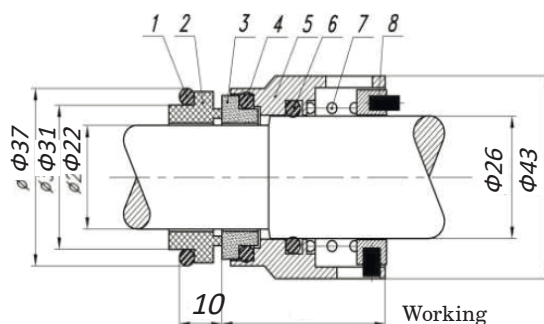

Mechanical seal R-LWR-22

Temperature: $-20^{\circ}\sim 140^{\circ}$
Pressure: ≤ 1.4 mPa
Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: Ceramic / SIC / TC.
- 2 Stationary ring: Carbon / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Single mechanical face seal R-LWR

Application in pumps Lowara SVI 33, 46, 66, 92

Analogue: AESSEAL T07 / T07D / T07X, Burgmann M2N, Roten UNITEN 22, Hecker HN 400A.

Lowara mechanical seals

Face seals and spare parts to LOWARA pumps (Lowara) Lowara SVI 33, 46, 66, 92.

- Q1Q1EGG KL01AC1
- Q1Q1TGG KL01AC6
- KL01AC5 Q1CTGG
- Q1Q1TGG KL01AC6

Lowara SVI is a vertical multistage centrifugal pump with a submerged hydraulic part designed for pumping liquid media without containing abrasive inclusions. The Lowara SVI 1602S pump housing is made of durable and corrosion-resistant chromium-Nickel steel, and the end seal is made of a composite material, which includes graphite, elastomers, and tungsten compounds, which provides maximum tightness and

wear resistance.

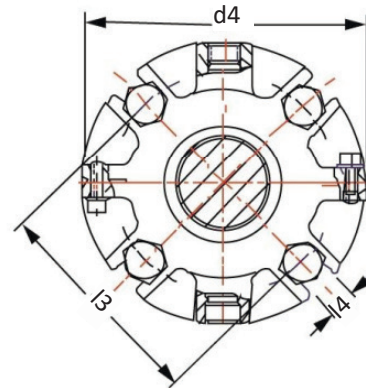

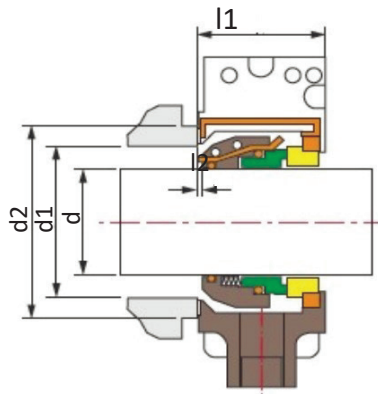

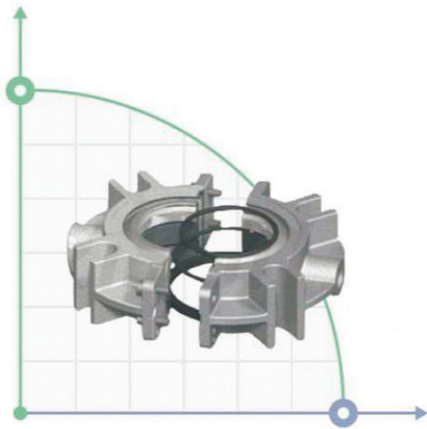

Mechanical seal R-TSSP-CO1

Temperature: $-20^{\circ}\sim 200^{\circ}$
Pressure: ≤ 4.0 mPa
Speed: ≤ 3600 rpm

Materials

- 1 Rotary ring: Carbon/ SIC / TC.
- 2 Stationary ring: Ceramic / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Рабочая длинна

Cartridge seal R-TSSC-A04 for agitators, reactors and mixers.

The design makes it possible to compensate for a larger radial run-out of the shaft than for standard single bearings. Channels are provided for supplying and draining the cooling liquid. The orientation can be horizontal or vertical.

Used at pressures up to 2.3 MPa, speeds up to 23 m / s, and temperatures from -30 degrees Celsius to $+200$ degrees Celsius.

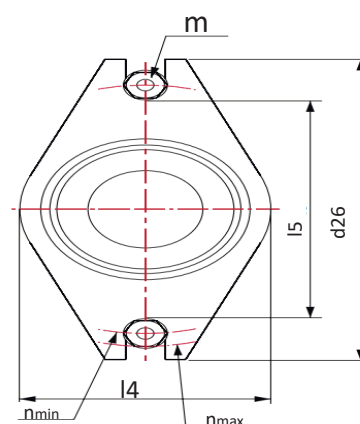

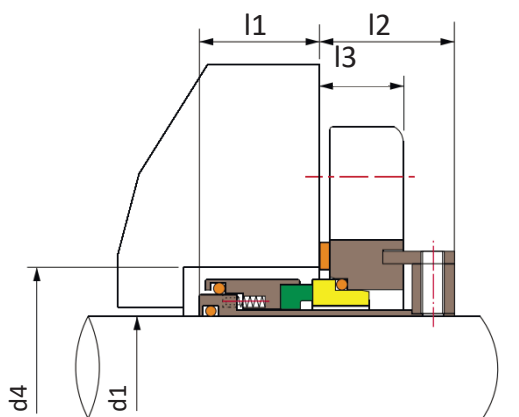

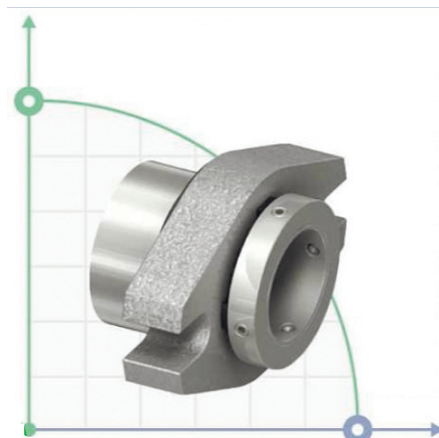

Mechanical seal R-TSSC-A01

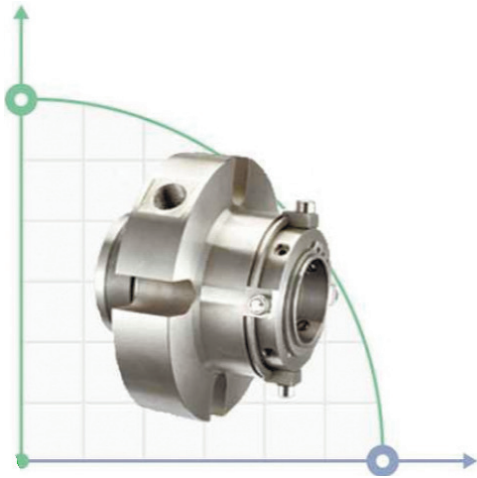

Temperature: $-40^{\circ}\sim 200^{\circ}$
Pressure: ≤ 2.5 mPa
Speed: ≤ 20 m/sec

Mechanical seal R-TSSC-A05

The design includes the inner part of the mechanical seal with a rotating bellows and the outer part with an impeller for forced cooling. Designed for sealing the product at very high temperatures. Channels for supplying and draining cooling liquid are provided.

Applied to Hecker HN 430N pumps, CR, NBG, Grundfos, TP, NKG, CLM, CRN series pumps and so on.

Analogue: AESSEAL BDFI & BDFC

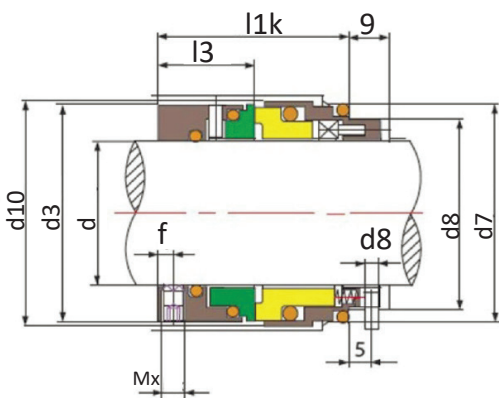

Mechanical seal R-HRN

Temperature: $-20^{\circ}\sim 220^{\circ}$
Pressure: $\leq 2.5\text{mPa}$
Speed: $\leq 20\text{ m/sec}$

Materials

- 1 Rotary ring: Ceramic / SIC / TC.
- 2 Stationary ring: Carbon / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

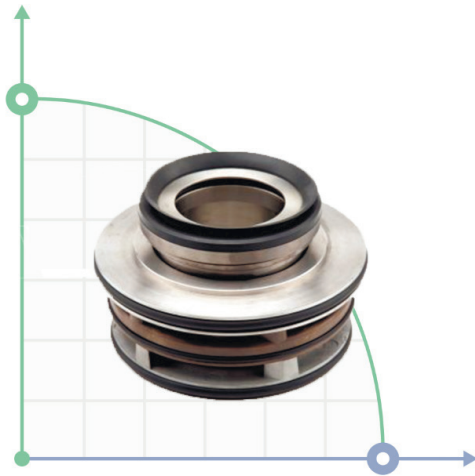

Single mechanical end seal R-HRN
- seal with a non-rotating movable ring.

It is suitable for contaminated environments with abrasive particles and waste water. Can be used as part of a tandem. The non-rotating multi-spring unit is isolated from the product, which prevents sticking and clogging.

Applicable to Alfa Laval, Ebara Lowara, KSB (Etanorm, Etachrom), WILO (MVI, MHI, IPL), Grundfos (CDM) Saer (IP), Calpeda (GM, MXS), Hecker HN 410SU pumps

Analogs: Burgmann HRN, Roten EHS3 seal

Mechanical seal R-6CF-16

Temperature: $-20^{\circ}\sim 100^{\circ}$
Pressure: ≤ 0.3 mPa
Speed: ≤ 5000 rpm

Materials

- 1 Rotary ring: Ceramic/Sic.
- 2 Stationary ring: Carbon/SIC.
- 3 Bellows: NBR.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Analog: Burgmann, John Crane, Roten, AESSEAL, Anga, Vulcan, Lidering, DIMER, Flowserve.

Sensors and electrodes

The electrodes / sensors are highly accurate. Sensors and electrodes for determining various water parameters: pH and RedOx (ORP) levels; turbidity; suspended particle concentrations; presence and level of free and total chlorine; carbon content; hydrocarbon content; electrical conductivity; temperature; reagent level; output flow, and others.

Sensors (electrodes) of the RedOx (redox potential) or Rx (ORP) level.

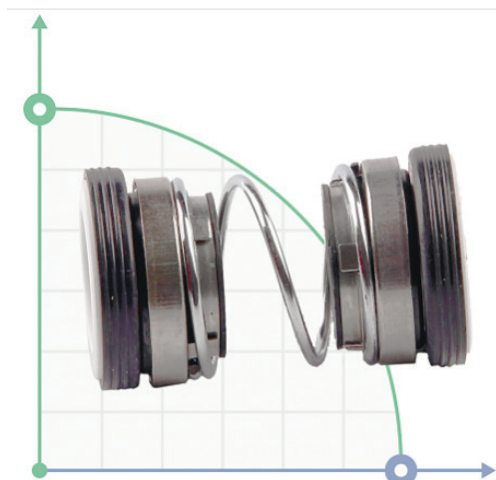

The sensor housing is made of epoxy plastic. Max. pressure-6 bar.

Max. temperature: up to 60°C .

Measurement range: $-1000\dots+1000$ mV.

Rx sensors (ORP) are supplied:

— with a 0.5 m coaxial cable and a BNC plug. Reliable and inexpensive Rx level sensors (orps).

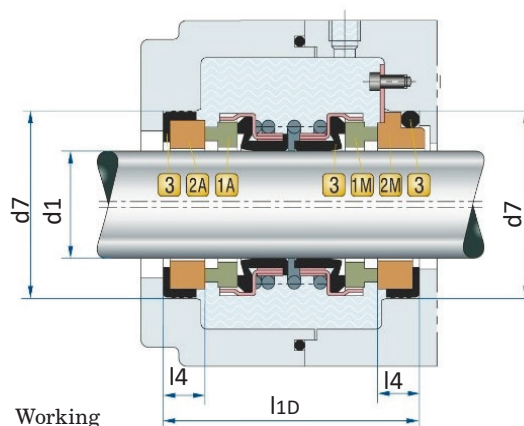

Mechanical seal R-4701

Temperature: -20~80
Pressure: ≤ 0.3 mPa
Speed: ≤ 3000 rpm

Mechanical seal R-LW

Used in Lowara pumps of the SV, e-SV series.

Oil pumps, radial piston

Axial-piston pump HA

Pumps HA...74M are designed for working with mineral oils with a viscosity from 21 to 265 mm²/s (cSt) at an oil temperature from +10 to +50 °C and an ambient temperature from 0 to +50 °C.

Recommended working fluids-mineral oils of research Institute NP-403 GOST 16728-78, IGP-30, IGP-38 according to TU 38-101413-97.

Nominal oil filtration fineness is 40 microns. Class of purity of the working fluid 14 according to GOST 17216-71.

Mechanical seal R-706F

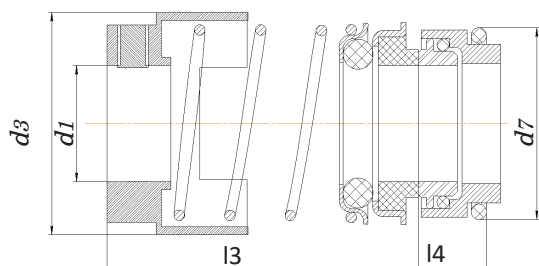

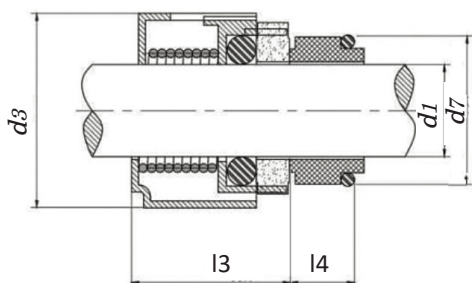

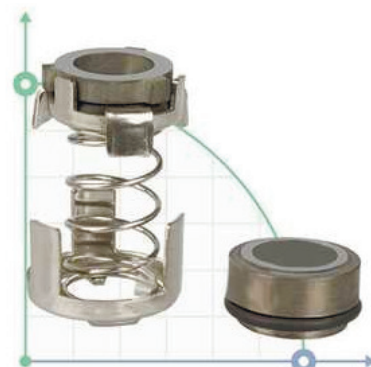

Temperature: -40~180

Pressure: ≤ 1.7 mPa

Speed: ≤ 15 m/sec

Materials

- 1 Rotary ring: Carbon / SIC / TC.
- 2 Stationary ring: Carbon / SIC / TC.
- 3 Bellows: EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

R-706F-22	22	43	37	37	16

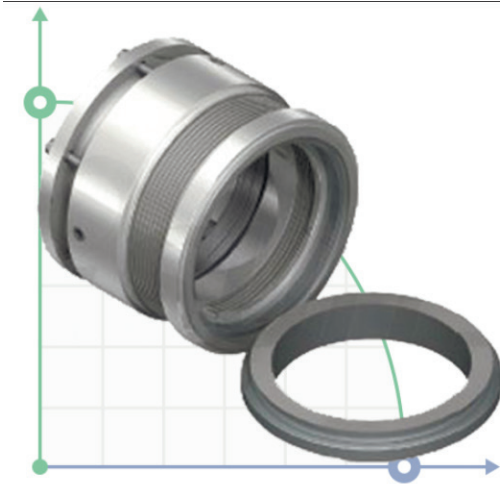

Used in pumps Grundfos: JP, Ch8, Ch12, CRK(I)2, CRK (I) 4 series. SPK1, SPK2, SPK4, SPK8 series. Cr2, Cr4 , CRN2, Ch4, LM, CM series.

Pumps for carbomide-ammonium mixtures

Dosing pumps for pumping flocculant from 1 l / hour to 1027 l / hour. Flocculant pumps are used for the following purposes:

- Wastewater treatment of industrial and agricultural enterprises
- Preparation of drinking water in public utilities
- Fixing of soils
- As a thickener of drilling and water-insulating solutions
- Mineral processing

Mechanical seal R-609

Temperature: -75~425

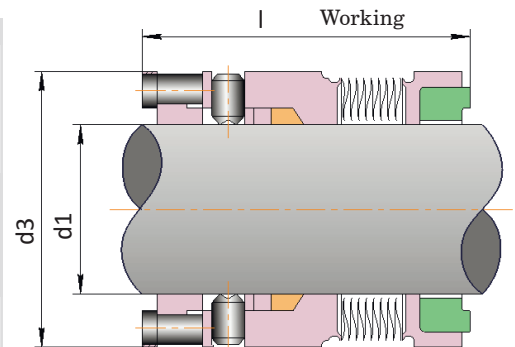

Pressure: ≤6.9 mPa

Speed: ≤25 m/sec

Materials

- 1 Rotary ring: SiC / Carbon / TC
- 2 Stationary ring: SiC / TC
- 3 Bellows: NBR/VITON.
- 4 Spring: SUS316L/AM350/Inconel718/Titanium/Hastelloy-C/AIloy-20.

Mechanical seal R-609

Mechanical end seal

The R-609 is designed for use at high temperatures (up to 425 ° C / 800 ° F) in pumps without expensive and time - consuming modification of the control chamber.

Applications include hot hydrocarbons, aqueous solutions, aromatic fractionation products, crude oil fractionation products, and heat carriers.

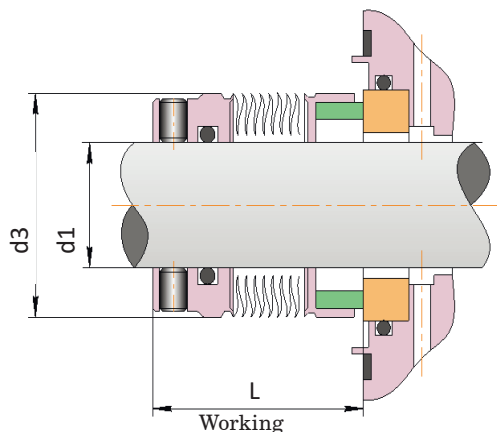

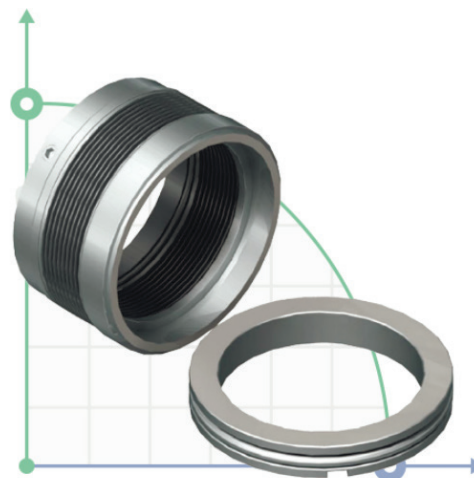

Mechanical seal R-680

Temperature: -20~200
Pressure: ≤2.1mPa
Speed: ≤25 m/sec

Materials

- 1 Rotary ring: SiC/Carbon/TC
- 2 Stationary ring: SiC/TC
- 3 Bellows: VITON/Encapsulated Ring/PTFE.
- 4 Spring: SUS316L/AM350/Inconel718/Titanium/Hastelloy-C/AIloy-20.
- 5 Metal parts: SUS304/SUS316/Titanium/Hastelloy-C

Mechanical seal R-680 (676 / 670 / 680)

Mechanical seal type R-680 with a rotating bellows made of AM350 alloy provides resistance to corrosion in aggressive environments with high levels of abrasives. Its design is intended for use in chemical, tap and waste water, pulp and paper and municipal industries. The o-ring does not have a compensating function, so the bellows can move without moisture.

Mechanical seal R-GEA

Temperature: -20~200
Pressure: $\leq 2.5\text{mPa}$
Speed: $\leq 25\text{ m/sec}$

Materials

- 1 Rotary ring: SiC/Carbon
- 2 Stationary ring: SiC/TC
- 3 Bellows: VITON/EPDM/NBR.
- 4 Spring: SUS304/SUS316
- 5 Metal parts: SUS304/SUS316

Seal with arbitrary rotation direction R-GEA

Seal for high-viscosity media. The springs of the BSH series face seals are reliably protected from contact with the medium, so these seals are ideal for high-viscosity media and media with solid particles, for example, for the sugar and paper industries or waste water. Strong, reliable, without sticking and clogging of springs.

Analog of mechanical seals: Burgmann HJ92N, Anga US.

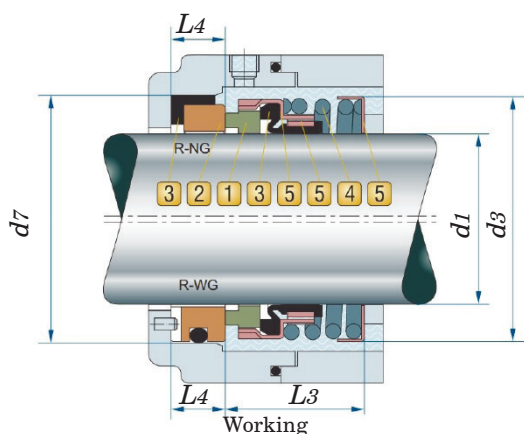

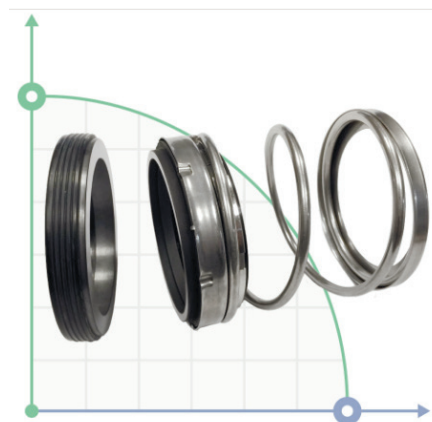

Mechanical seal R-21

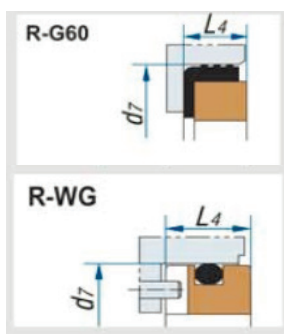

Temperature: $-20 \sim 145$
Pressure: ≤ 1.5 mPa
Speed: ≤ 13 m/sec

Materials

- 1 Rotary ring: Carbon / SIC / TC.
- 2 Stationary ring: Ceramic / SIC / TC.
- 3 Bellows: NBR / EPDM / VITON.
- 4 Spring: SS304 / SS316.
- 5 Metal parts: SS304 / SS316.

Type of counter ring

Mechanical seal R-21

It is applied to pumps of the Haigh, Hidrostal, Hilge, Inbeat, INOX series and so on.

Analogue: Burgmann MG920/ D1-G50 seal. Crane 21 (N SEAT) seal. Flowserve 200 seal, Latty T200 seal, Roten RB02 seal, Roten 21 seal, Sealol 43 CE short seal, Sterling 212 seal, V ulcan 20 seal.
